## Executive Summary

A total of 16 state charter schools operated in Georgia during the 2013-2014 school year, though two of the 16 ceased operations at the end of the school year. Of the 14 with continuing operations, two schools, the Georgia Cyber Academy and the Odyssey School, appear as a single institution in Georgia Department of Education administrative records during the 2013-2014 school year. Thus, this report focuses on the performance of 13 state charter schools in the 2013-14 school year and also provides performance data for 2012-13 to gauge how state charter school performance is changing over time. Key findings are:

**State charter schools are diverse and many provide learning environments that differ from those of traditional public schools.** State charter schools vary along multiple dimensions, including grade levels, student demographics, instructional mode (face-to-face or virtual), curricular focus and geographic area served. Four of thirteen serve only elementary and middle grades, another four serve elementary, middle and at least some high school grades, three serve both middle and high grades and two only offer grades 9-12. Four of the thirteen are single-gender schools, and African-American enrollment at four schools exceeds 90 percent. Two schools have over 10 percent of students classified as gifted while three report no gifted students. Three of the thirteen schools provide fully online course offerings while the remaining 10 provide face-to-face instruction exclusively. The three fully online virtual schools and one “brick-and-mortar” school enroll students from throughout the state, one school enrolls students who reside within a five-county region, and the remaining eight enroll students from a single school district only.

**The majority of state charter schools serving elementary grades do not perform as well as the average public elementary school in the state.** The estimated contribution to student achievement in grades four and five across all five CRCT-tested subjects (reading, math, ELA, science and social studies) was below the state average for six of the eight state charter schools serving elementary grades. Performance for the other two was not significantly different from the state average. This cross-subject average masks significant variation across subjects, however. For example, in ELA only two of the eight schools perform below the average elementary school in the state and the performance of one school exceeds the state average. In contrast, the estimated contribution to student achievement in mathematics is below the state average for six of the eight state charters and indistinguishable from the state average for the other two.

**Most state charter schools serving middle grades perform as well or better than the average public middle school in the state.** The estimated contribution to student achievement in grades 6-8 averaged across all five CRCT-tested subjects is indistinguishable from the state average for six of the 11 state charter schools that offer at least enroll students in one or more of grades 6-8. The cross-subject average performance of two state charters exceeds that of the average middle school in the state, and the contribution to student achievement for three state charters falls below the state average. Performance of state charters serving middle grades is particularly strong in reading and language arts. In reading, the performance of six of the eleven schools exceeds the state average, and none of the schools exhibit performance below the average middle school in the state. Likewise, in ELA the performance of only one school falls below that of the average middle school in the state, and five exhibit performance above the state average. However, performance in science and social studies is much weaker. In science, seven of eleven schools have estimated contributions to student achievement that fall below

the state average and none exhibit performance that is significantly above that of the state average middle school in the state. In social studies, the performance of seven schools is below the state average, two exhibit performance that is above the state average and the performance of two is indistinguishable from the state average.

**The performance of state charter schools serving high schools grades is mixed when compared to the average public high school in the state.** As for elementary and middle grades, state charter schools serving some or all of grades 9-12 generally perform better in language arts than in math, science and social studies disciplines. Variation across subjects must be interpreted with caution, however, since some state charters have just begun to expand their range of grade offerings into high school and thus the sample of schools varies across subject areas. Further, three of the five state charters offering all high school grades (9-12) are virtual schools. In 9<sup>th</sup> Grade Literature, four of nine state charters are performing above the state average and the performance of the other five is indistinguishable from the state average. For the four schools with test scores for American Literature, two contribute more to student achievement than the state average while the other two contribute less than the state average. In contrast, in Analytic Geometry four of five schools perform below the state average and one performs above the state average. In Biology three of six schools perform below the state average and the performance of the other half is indistinguishable from the state average. Similarly, in Physical Science four of seven schools have estimated contributions to student achievement below the state average, two are indistinguishable from the state average and one exceeds the state average. Performance is also generally low in Economics, with three of four schools performing below the state average and one whose performance is indistinguishable from the state average.

**The majority of state charter schools serving elementary grades do not perform as well as the average elementary school in their district(s).** Similar to statewide comparisons, the contribution to student achievement averaged across all five CRCT-tested subjects is below the average of all elementary schools in the relevant district for six of eight state charters serving elementary grades. One school's contribution is indistinguishable from the district average and one school's contribution is above the district average.

**The performance of state charter schools serving middle grades is mixed when compared to the average of all middle schools in the relevant district(s).** Of the eight state charter schools serving middle grades, two perform better than the average of middle schools in their district (based on cross-subject averages of the estimated contribution to student achievement). Four perform worse than the average school in their district, and the performance of the other five schools is indistinguishable from the average school in the district.

**At the high school level, most state charters outperform the average school in their district in at least one subject, but no state charter schools outperform the average school in the district or districts they serve in a majority of subjects.** Of the nine state charter schools serving one or more high school grades, one performs above the district average in one subject, three outperform the district average in two subjects and one outperforms the district average in three subjects. However, a number of schools perform below the district average in multiple subjects and no state charter schools contribute more to student achievement than the average school in their district in a majority of the subjects in which their students are tested.

## I. Introduction and Background

There were 16 state charter schools operating in Georgia during the 2013-2014 school year, though two of the 16 ceased operations at the end of the year. Although the current State Charter Schools Commission has only been in operation since 2013, many of the state charter schools have been in existence for several years. Some were originally formed as state chartered special schools or were initially chartered by the original Georgia Charter Schools Commission, which was declared unconstitutional by the Georgia Supreme Court.<sup>1</sup> Table 1 summarizes information about the 14 schools that continue to operate after the 2013-14 school year, including when the school opened, whether it is affiliated with an education management organization (EMO), grades served, curricular model, school calendar, delivery model (virtual vs. physical classrooms), attendance zone, and any special enrollment requirements (parental participation requirements or gender restrictions). The 14 schools are quite diverse in their structure, mission and service area. For example, three of the 14 state charter schools are virtual schools, and many of the state charter schools target traditionally underserved populations. Four of the schools are single-gender schools. The majority of state charter schools (9 of 14) serve students in a single district/county, one school (Pataula Charter Academy) has an attendance zone that spans multiple counties and the remaining four schools serve students from the entire state.

The state charter schools also vary considerably in the populations of students they serve, as illustrated in Table 2. Four of 13 schools serve almost exclusively African-American students.<sup>2</sup> In contrast, five have student populations in which fewer than 20 percent of students are black or Hispanic. There is considerable diversity in proportions of Limited English Proficiency (LEP) students, students eligible for Free/Reduced-Price Lunch (FRL), Students with Disabilities (SWD) and gifted students as well.

---

<sup>1</sup> Details on the history of charter schools in general and more specifically state chartered schools, is contained in Georgia Department of Education (2012).

<sup>2</sup>The Georgia Cyber Academy and the Odyssey School appear as a single institution in Georgia Department of Education administrative records. Therefore, they are combined in Table 2 and all of the subsequent analyses.

*Table 1: General Characteristics of State Charter Schools*

School Name	Calendar Year Opened	EMO Affiliation	Grades	Curriculum Focus	School Year	Single-Gender School	Virtual/ Online School	Serves Multiple Counties	Parental Involvement Requirement	Enrollment Restrictions
Atlanta Heights	2010	National Heritage Academies	K-8	None	Normal	No	No	No	Not Specified	Atlanta Public Schools Zone
Charter Conservatory for Liberal Arts and Technology (CCAT)	2002	No	6-12	Multi-age classrooms - students grouped by skill level	Year-round	No	No	No	1 Hour of Service/week	Bulloch County Public Schools Zone
Cherokee Charter Academy	2011	Charter Schools USA	K-9	None	Normal	No	No	No	Not Specified	Cherokee County Public Schools Zone
Coweta Charter Academy	2010	Charter Schools USA	K-6	None	Normal	No	No	No	20 hours volunteer/year	Coweta County Public Schools Zone
Fulton Leadership Academy	2010	No	6-9	STEM with focus on aviation and aeronautics - partnership with Civil Air Patrol	Normal	Boys Only	No	No	Not Specified	Fulton County Public Schools Zone
Georgia Connections Academy	2011	No	K-12	Online Curriculum	Normal	No	Yes	Online	Not Specified	Students residing in State of GA
Ivy Preparatory Academy at Gwinnett	2008	No	6-11	Curriculum is entirely College Preparatory. Saturday Academy is available to struggling students.	Extended Day/Week/ Year	Girls-Only	No	No	Not Specified	Gwinnett County Public Schools Zone

School Name	Calendar Year Opened	EMO Affiliation	Grades	Curriculum Focus	School Year	Single-Gender School	Virtual/ Online School	Serves Multiple Counties	Parental Involvement Requirement	Enrollment Restrictions
Ivy Preparatory Academy at Kirkwood	2011	No	K-8	Curriculum is entirely College Preparatory. Saturday Academy is available to struggling students.	Extended Day/Week/ Year	Girls-Only	No	No	Not Specified	DeKalb County Schools Zone
Ivy Preparatory Young Men's Leadership Academy	2011	No	K-8	College Preparatory curriculum for all students.	Extended Day/Week/ Year	Boys-Only	No	No	Not Specified	DeKalb County Schools Zone
Mountain Education Charter School	2007	No	9-12	Self-paced, individualized, evening high school for students struggling at other schools	Year-round	No	No	Yes	No	Students residing in State of GA
Odyssey School (including the Georgia Cyber Academy Program)	2004	K-12 (GCA Only)	K-12	Multi-age classrooms - students grouped by skill level/Looping: students remain with teacher two years (Odyssey School Only)	Normal	No	GCA Program	Yes (GCA Only)	18 hours per academic year (Odyssey School Only)	Coweta County Public Schools Zone (GCA serves students statewide)
Pataula Charter Academy	2010	No	K-9	Expeditionary Learning: project based lectures and curriculum delivery/Looping: students remain with teacher for two years	Normal	No	No	Yes	Not Specified	Students residing in Baker, Calhoun, Clay, Early, Randolph Public School districts
Provost Academy	2012	No	9-12	Online Curriculum	Normal	No	Yes	Online	Not Specified	Students residing in State of GA

Note: Grade levels served based on enrollment as of October 2013.

## II. Methodology and Data

### A. *Alternative Methods for Evaluating School Performance*

In order to evaluate the performance of state charter schools, there are two related challenges that must be addressed. First, like schools chartered by local school districts, state charter schools are schools of choice. As such, students and their parents have made a conscious decision to attend these schools rather than their neighborhood traditional public school. This individual selection process makes simple comparisons of student performance in state charter schools to traditional public schools problematic. Average test scores or other measures of student performance could reflect the attributes of the students and their families, rather than the performance of the school they attend. For example, if more highly motivated students/families select state charter schools, this would impart an upward bias to the measured performance of state charter schools. Conversely, if students who are struggling are more likely to seek out alternatives to their neighborhood traditional public school, this could bias downward the average achievement in state charter schools.

Evaluation of the performance of state charter schools is further complicated by the fact that they frequently serve students from multiple counties and have specialized missions. As noted above, three of the 16 state charter schools are virtual schools, and many of the state charter schools target traditionally underserved populations, such as students at risk of dropping out. This exacerbates the selection problem; greater diversity in school programs will tend to lead to even more sorting across schools. For example, the students who choose a virtual learning environment may differ even more from the typical student in a traditional public school than would a student attending a local “brick and mortar” charter school.

Although state charter schools are particularly diverse, the challenges to evaluating their performance are not unique. The issue of selection arises in the evaluation of locally approved charters, traditional public schools and individual teachers as well. A variety of methods have been employed by state and local education authorities throughout the country to evaluate the effects of schools and teachers on student achievement. While the particulars of each evaluation system vary, the methods can be placed into three general categories: value-added models, student growth percentiles and proficiency benchmarks.<sup>3</sup>

---

<sup>3</sup> A fourth method used by academic researchers to evaluate charter schools is the analysis of admission lotteries (Hoxby & Rockoff (2004), Hoxby & Murarka (2009), Dobbie & Fryer (2009), Gleason, et al. (2010)). By law, charters must hold lotteries for admission if there are more students who want to attend than there are spots available. Since admission is random, one can gauge charter performance by comparing the achievement of students who “win” the lottery and gain admission to a charter to lottery “losers” who sought admission to a charter school, but ended up attending a traditional public school. In effect, the lottery creates a randomized trial where the lottery winners are the treatment group and the lottery losers are the control group. Unfortunately, since admission lottery data are not uniformly collected and not all state charter schools are oversubscribed, this is not a viable strategy in the present context.

## *1. The Value-Added Model Approach*

One way to evaluate school performance is to estimate the determinants of individual student test scores using a “value-added” model (VAM) of student achievement.<sup>4</sup> VAMs typically include statistical controls for observable student characteristics and prior academic performance in order to account for self-selection. Most often factors like free/reduced-price lunch eligibility (a proxy for family income), English language learner status, and disability status are taken into account.<sup>5</sup> Race, gender, mobility and age are also sometimes included in the model.<sup>6</sup> This approach has been used by academic researchers to study the impact of charter schools in many jurisdictions including Arizona (Solmon, Paark & Garcia (2001)), Florida (Sass (2006)), North Carolina (Bifulco and Ladd (2006)) and Texas (Booker, et al. (2007)). It is also being used to evaluate teacher performance in Florida, Louisiana, North Carolina, Ohio, Tennessee and Washington, DC.

In essence, the value-added model predicts what a student’s test score would be based on his/her prior test scores and demographic characteristics. The difference between the actual and predicted current test score is a measure of the educational entity’s contribution to student achievement. In the context of school-level evaluations, the estimated effect for a school is essentially the difference between actual and predicted test score for each student, averaged over all students in a school.

## *2. The Student Growth Model Approach*

Several states, including Colorado, Georgia, Massachusetts and New Jersey, are using student growth models to evaluate teacher performance.<sup>7</sup> Like value-added models, the student growth model gauges the performance of teachers or schools by comparing the test scores of individual students to a reference standard. In the case of value-added, the benchmark is the expected performance of a student with the same observable characteristics and prior scores. For the student growth model, the standard is the actual performance of other students with the same prior-year test score (or history of test scores). There are two fundamental differences between the value-added model used in this analysis and the student growth model currently employed in Georgia, however. First, Georgia’s student growth model does not include explicit controls for student characteristics like disability status or eligibility for

---

<sup>4</sup> Details on the specification of value-added models and the estimates obtained for Georgia public schools are provided in the Technical Appendix. See also Todd and Wolpin (2003), Guarino, Reckase and Wooldridge (2012) and Sass, Semykina and Harris (2013).

<sup>5</sup> For example, Florida’s model includes disability status, English Language Learner status, gifted status, prior attendance, mobility and student age. Washington DC’s model controls for poverty status, limited English proficiency status, prior attendance, mobility and poverty. Louisiana’s model includes controls for disability status, gifted status, poverty and prior disciplinary actions.

<sup>6</sup> While all value-added models include some measure of prior student performance, specific value-added specifications may vary in the degree to which observable student characteristics are taken into account (including none at all). The analysis below focuses on a value-added model that includes essentially all available student characteristics. However, the technical appendix reports results based on alternative value-added specifications with either no student characteristics (i.e. only prior test scores) and the full set of student characteristics except for race/ethnicity. The specification of value-added models used for teacher accountability systems vary across states.

<sup>7</sup> For a list of states employing or planning to use student growth models, see Wash and Isenberg (2013).

free/reduced-price lunch.<sup>8</sup> This means that school-level average student growth measures will reflect both the impact of a school on student learning and the influences of student characteristics that are not accounted for by prior test scores. For example, if students with disabilities typically experience less growth in achievement than do their typical peers who started with the same prior-year test score, a school with an unusually high proportion of students with disabilities would have a lower mean student growth score than an otherwise identical school with fewer students with disabilities. Second, the student growth model approach is based on student performance *rankings* among students with the same prior-year test score (or history of test scores), not absolute differences in scores across students. This means there is no need to account for differences in the scaling of tests across years and subjects. It also means that student performance is gauged by the ordering of test scores, not by how much one student's score exceeds that of another.

The logic behind the approach is straightforward, though the underlying calculations are complex.<sup>9</sup> As an example, imagine plotting the distribution of fourth-grade test scores obtained by students who all had the same third-grade test score the prior year. Students are assigned a student growth percentile (SGP) depending on where they fall in that distribution. An SGP of 70 would indicate that 70 percent of students with the same third-grade score in the prior year obtained a lower fourth-grade score. To evaluate individual teachers or schools, either the mean or the median SGP value of all students in the relevant unit is typically used.

### 3. Proficiency Targets

Many state school accountability systems are based in part on whether or not students meet a certain threshold achievement score on tests. For example, about one-fourth of a school's score on Georgia's College and Career Ready Performance Index (CCRPI) is determined by the proportion of students who "meet" or "exceed" proficiency standards established by the state.<sup>10</sup> In general, proficiency targets (including those in the CCRPI) and associated threshold scores for determining achievement levels are set by policy makers and focus on absolute performance rather than growth.

The advantage of proficiency targets is they establish an absolute benchmark and thus all schools could potentially improve from one year to the next. In contrast, both the value-added and student growth models yield relative measures of school performance. In the case of value-added, schools are compared to the average school in a state. Student growth models yield SGPs for individual students, which by definition have a median value of 50. Therefore

---

<sup>8</sup> Most student growth models used in teacher accountability systems do not include any student characteristics. One exception is the State of New York. In 2011/12 New York State used both "conditional" and "unconditional" student growth percentiles to evaluate teacher performance. The "conditional" SGP approach essentially estimated a value-added model and then used the resulting predictions to determine a student's ranking and SGP. See American Institutes for Research (2012).

<sup>9</sup> Student growth percentiles are generated using a non-parametric quantile regression model. For details see Betebenner (2009) and Goldhaber, Walch and Gabele (2012).

<sup>10</sup> For 2014, 60 points of the CCRPI are based on "achievement," 40 percent of which is based on content mastery. The remaining 40 points of the CCRPI are determined by progress (25 points) and closing achievement gaps (15 points). An additional 10 points can be earned above the 100-point total through challenge points. The progress portion of the CCRPI is based on a school's students demonstrating typical or high growth via their student growth percentile.

aggregations of student performance to the school level (whether means or medians) are implicitly tied to the median student's performance across the state.

The downside of achievement levels and associated proficiency targets is that they do not control for student selection into schools. Thus, scores may reflect the abilities of students and the parental support they receive, rather than a school's contribution to student learning. For example, *on average*, students from more affluent families tend to score higher on achievement exams than do students from lower-income families. Thus, even if the quality of teachers and school leaders were equal across all schools in a state, the schools serving more advantaged students would tend to receive higher scores on a proficiency-target metric.

Given the problems associated with the use of proficiency targets, this report focuses on value-added and student-growth estimates to evaluate the performance of state charter schools. However, descriptive evidence in the form of proportions of students meeting proficiency standards are reported in order to provide a picture of the current achievement level of students attending state charter schools.

## B. Data

To estimate the value-added model and derive estimates of the impact of each school on student achievement, data from Georgia's State Longitudinal Data System, known as GAAWARDS (Georgia's Academic and Workforce Analysis and Research Data System) are employed. GAAWARDS is maintained by the Governor's Office of Student Achievement (GOSA) and combines data from the Georgia Department of Education (GaDOE) along with data from eight other state agencies: Department of Labor (workforce data), Department of Early Care and Learning ("Bright From the Start" pre-K program), Georgia Student Finance Commission (financial aid), Governor's Office of Student Achievement, Georgia Professional Standards Commission (teacher licensure), Technical College System of Georgia, University System of Georgia and the State Charter Schools Commission. GAAWARDS also includes data from the Georgia Independent College Association.

For grades 3-8, achievement is measured by scores on the Criterion Referenced Competency Test (CRCT) in Reading, English Language Arts (ELA), Math, Science and Social Studies. Prior-year scores in all five subjects are used to control for student ability and prior educational inputs.<sup>11</sup> For high school students, End-of-Course test (EOCT) scores in Math (Analytic Geometry, Coordinate Algebra, Math II), ELA (9th Grade Literature and Composition, American Literature and Composition), Science (Biology, Physical Science) and Social Studies (U.S. History, Economics) are employed. For the analysis of EOCT scores, 8<sup>th</sup> grade CRCT scores in all five subjects are used as controls. Because the CRCT does not vertically align scale scores over time, and the CRCT and End-of-Course Tests can vary from year to year, all scale scores are converted to normal-curve equivalents (z-scores) based on the testing population in the state for each grade, year, and subject. Thus, school effect estimates are measured in standard deviation units or "effect sizes."

In addition to prior test scores, the value-added model includes the following student characteristics as controls: gender, foreign-born indicator, race/ethnicity, ESOL enrollment,

---

<sup>11</sup> Same-subject actual prior-year scores are employed. For other subjects (e.g. prior-year science score when evaluating value added in math), missing values are imputed by using the mean of scores from other subjects.

free/reduced-price lunch eligibility, gifted status, primary-language-not-English indicator, disability status (15 specific disability categories), number of schools attended in the current year, an indicator for students who changed schools from the prior year, number of disciplinary incidents in the prior year, attendance in the prior year and the difference between a student's age (in months) and the modal age of students in the same grade.<sup>12,13</sup>

Individual-level student growth percentiles were calculated by the GaDOE and provided to the GAAWARDS staff who in turn assigned anonymous student codes. A very small number of students with SGPs could not be matched to records in the GAAWARDS system and were thus excluded from the analysis. It is important to note that SGPs are not calculated by the GaDOE for students who repeat a grade or skip a grade because the pool of students who took the same grade level exam in the prior year is too small to form a valid SGP.

For both the value-added and student growth model analyses, students were assigned to schools using the "Full Academic Year" (FAY) rule used in the CCRPI calculations. For grades 3-8, FAY was determined by the number of calendar days between the start of each school's school year and the end of the state CRCT testing window. For grades 9-12, FAY for each school was measured by the calendar days between the start and end of the school year. For each student, the school of longest attendance was determined based on individual attendance records. The total calendar days enrolled at the school of longest attendance was then determined. If a student's calendar days of enrollment were at least 65 percent of the FAY, they were assigned to that school for the purposes of determining value-added school effects and mean or median school SGPs.

### III. Results – All State Charters

#### A. Proficiency Targets

Proficiency percentages obtained by students in state charters on the CRCT and EOCT exams are those reported publicly by the GaDOE and are presented in the individual school summaries.<sup>14</sup> Statewide and district averages are also provided for reference.<sup>15</sup> It is important to emphasize that proficiency percentages reflect the ability and motivation of students, family resources and the quality of education received in prior years. As such, they provide a picture of

---

<sup>12</sup> The difference between a student's age and the modal age of other students in the same grade is included to control for students who had previously be retained or started kindergarten late. This variable was not included in the value-added model used for 2012/13 state charter schools accountability report.

<sup>13</sup> In addition to the value-added model with all of the specified student characteristics as controls, two other specifications were also estimated. One alternative specification omitted student race/ethnicity and the other omitted all student characteristics (and thus only included prior test scores). Results based on these alternative specifications are available in the Technical Appendix.

<sup>14</sup> Georgia Department of Education (2014a) and Georgia Department of Education (2014b). Minor differences in underlying data sometimes result in slight discrepancies when compared to the proficiency levels published on the Governor's Office of Student Achievement's Report Card.

<sup>15</sup> Cross-school comparisons of proportions of students meeting proficiency targets are provided in the Technical Appendix.

the current achievement level of students, not necessarily the impact a student's current school has had on their achievement within the previous year.

When considering the proficiency percentages, a few patterns emerge at the elementary and middle school levels (grades 3-5 and 6-8). First, there is considerable variation across subjects and across grades, even within a school. Second, three state charter schools stand out as having large proportions of struggling students across multiple subjects. Atlanta Heights and Ivy Preparatory Young Men's Leadership Academy each have 40 percent or more of their students in the "does not meet standards" category in multiple CRCT-tested subjects. Similarly, Provost Academy has over half of their students failing to meet standards on four End-of-Course Exams: Math II, Biology, U.S. History and Economics. At the other end of the scale, Coweta Charter Academy frequently has much larger percentages of students in the "exceeding state standards" category than the statewide average. Cherokee Charter Academy also tends to have relatively high proportions of students exceeding grade-level expectations.

While proficiency targets are important to show a school's absolute performance, examining student growth within a school year provides a stronger indication of the school's impact on student learning. The next section provides an overview of the value-added and student growth estimates that provide a more complete picture of a school's impact.

### *B. Value-Added and Student Growth Model Estimates*

By construction, the average school at a given grade grouping (elementary, middle or high school) in Georgia has a school effect of zero in the value-added model (controlling for student characteristics). The performance of each school in a given grade grouping is measured relative to this average. Thus, a positive estimated value for an elementary school's effect indicates that students attending that school experience greater growth in achievement than do students with the same observable characteristics at the average elementary school in the state. Negative values do not mean that the achievement of the school's students fell during the year. Instead, a negative school effect indicates the gap between that school's contribution to student achievement and the contribution of the average school (measured in standard deviation units). For example, a value of -0.10 means that a school's contribution to student achievement is 0.10 standard deviations below that of the average school in the state. In the same way, a value of 0.10 means that a school's effect is 0.10 standard deviations above the average school in the state. To put this in perspective, reducing class size in elementary grades by seven students is associated with a 0.10 to 0.20 standard deviation increase in student achievement (Whitehurst and Chingos (2011)) and the difference in the effectiveness of a rookie teacher and one with three years of experience is about 0.07 standard deviations (Dee and Wyckoff (2013)).

The value-added effects for schools are statistical estimates and carry some degree of uncertainty. Along with the estimated effects, the value-added model generates a measure of the uncertainty of each school's effect, the estimated standard error. The estimated standard errors can be used to develop confidence intervals around each school's estimated impact on student achievement. With a confidence interval of approximately plus-or-minus two standard errors, one can be 95 percent confident that the true school effect lies in that range. Thus, for example, if a school's estimated effect is 0.5 and the standard error is 0.1, one can be 95 percent confident that the true effect lies in the range of 0.3 to 0.7. This information can then be used to determine how confident we are that a given school's performance is above, below, or equal to the average school. The standard errors and confidence intervals will generally be smaller the larger the number of students per school. The estimated school effect on achievement will

vary with the performance of individual students. In a small school, random events like a student having a poor night's sleep or getting "lucky" in their guesses on an exam will have a larger impact on the school's overall effect creating more uncertainty in the true school effect whereas in a large school such random events will tend to cancel out. Thus, for example, the Odyssey School, which includes the virtual Georgia Cyber Academy, has the largest enrollment of any state charter school and correspondingly tends to have the smallest confidence interval.

Student growth percentiles measure where a student is in the distribution of current achievement relative to students with the same prior-year test score (or history of test scores). Thus, by definition, a score of 50 for a student indicates that about half of students with the same test score last year did better this year and about half did worse. School-level averages of student growth percentiles are reported below. The statewide school-level mean of SGPs is approximately equal to the statewide student median of 50, which provides a benchmark for comparing scores across schools.<sup>16</sup> Unlike the value-added model, the student growth percentiles produced from Georgia's model do not include standard errors or confidence intervals at this time.<sup>17</sup> Without this information, one cannot quantify the likelihood that two schools with different mean or median SGPs are in fact no different. Put differently, absent a measure of precision, we could judge one school as superior to another when in fact they are likely no different.

For both the value-added and student growth models, separate estimates are presented for different grade groupings and for different subjects. In addition, an estimated effect on average performance across all subjects in each grade grouping is produced. Thus, for example, a charter serving grades K-8 receives two value-added scores in math, one for its impact on math achievement of students in elementary grades (grades 4 and 5) and another for its impact on students in middle grades (grades 6-8).

### *C. Summary of Findings*

A total of 21 figures are presented, five for each of the subjects tested in elementary school, five more for the same subjects in middle school, nine high school courses for which

---

<sup>16</sup> For 2013-14 the GaDOE computed student growth percentiles in two different ways. In the "cohort SGP" approach, statistical models are updated annually so that the median student receives a SGP of 50 each year. This means that the baseline is reset each year and (as with value-added measures), it is not possible to measure a general increase in student achievement gains across all students. In attempt to capture general changes over time in teacher effectiveness the GaDOE also computed a "baseline-referenced SGP." As the name implies, the baseline-referenced SGP uses the same model each year which was developed using a baseline cohort of students. This results in SGPs relative to the baseline cohort and therefore allows for the possibility of universal improvement in performance over time. However, as a consequence, the median baseline-referenced SGP will not necessarily equal 50. In 2013-14 cohort-referenced SGPs were used for EOCTs in math, but baseline-referenced SGPs were used for the CRCTs and all non-math EOCTs. Future SGP calculations will only use the cohort-referenced method. See McCaffrey, Castellano and Lockwood (2014).

<sup>17</sup> It is possible to compute standard errors for student growth percentiles, but there is no single accepted methodology for doing so and most state accountability systems that utilize student growth percentiles, including Georgia's, do not report standard errors at this time. The GaDOE is still developing its approach for calculating standard errors. For a discussion of standard errors in the student growth model see Doran, Swanlund and Lemke (2012) and American Institutes for Research (2012).

EOCTs are administered, and two for the five-subject averages for elementary and middle school. Based on value-added, the majority of state charters perform at a level that is not significantly different from the average school in Georgia in three of the 19 specific grade group/subject combinations: Elementary ELA, 9<sup>th</sup> Grade Literature and Coordinate Algebra. In ten areas, the majority of state charters perform significantly worse than the average school in Georgia: Elementary Math, Elementary Science, Elementary Social Studies, Middle Science, Middle Social Studies, Analytic Geometry, Biology, Economics, Physical Science and U.S. History. Conversely, state charters tend to outperform the average school in Middle School Reading. Results are mixed for state charters in the remaining five grade level/subject areas: Elementary Reading, Middle Math, Middle ELA, High School American Literature and High School Math II.

The comparisons with state averages provide an overall picture of state charter school performance. More relevant are comparisons between individual state charter schools and other schools (both traditional public schools and local charters) in the geographic areas they serve. Following the 21 figures mentioned above that combine results for all state charters, Section IV presents individual school summaries as well as graphs comparing each school's results with schools in the district it serves (where applicable).

## IV. Results – Individual School Summaries

The following tables summarize both state and district comparisons of performance for each state charter school. Two estimates of school performance are reported, one based on the value-added model and the other derived from the student growth models. The value-added model includes all available student characteristics (plus prior-year test scores) as controls. Results from two other value-added models, one excluding student race/ethnicity and the other including only lagged test scores, are presented in the Technical Appendix. The student growth model yields individual student growth percentiles which are then averaged across students in a school to produce a mean student growth percentile measure of school performance.

For both the value-added and student-growth percentile measures, a state percentile and a district rank are presented. The state percentile represents the proportion of schools in the state with a lower school effect. Thus, for example, a state percentile of 60 means that 60 percent of schools in the relevant grade group rank below the school. District ranks represent the position of a school relative to other schools in the same district offering the same grade group. For example a ranking of “25 out of 40” indicates that 24 schools from the relevant district have higher scores and 15 have lower scores.

For state charters serving students from a single school district or county, it is possible to compare their performance to traditional public schools and locally approved charters in the same area. For nearly all state charter students, the relevant public school option is a school in the same district as the district served by their current school. Put differently, a within-district comparison shows how students would likely fare if a state charter were to close. Five of the 15 state charter schools serve students from multiple counties or the entire state. Thus, the following analyses only cover the remaining 10 single-district/county state schools. Of these 10 schools, some do not currently serve all high school grades or have fewer than 15 test takers on some of the EOCT exams. Consequently, the within-district comparisons at the high school level are limited.

For both the value-added and student-growth metrics a comparison between a school’s 2013/14 and 2012/13 performance is provided. Estimates for both years are based on the model used in 2013/14, and thus the performance estimates for 2012/13 reported here differ from those in the 2012/13 State Charter Schools Performance Report.<sup>18</sup>

Each school summary report is structured as follows:

- Key Findings
- General Characteristics
- School Demographics
- Value-Added and SGP Results Summary by Grade Level and Subject
- Comparison of Summary Results from 2013/14 and 2012/13
- Comparison of School Impact
- Proficiency Level

---

<sup>18</sup> The value-added model used in the 2012/13 report did not include a control for a student’s age relative to the age of their grade-level peers. Also, the mean student growth percentiles in the 2012/13 report are schoolwide averages that include all students in a school for which a student growth percentile was calculated. The student growth percentiles averages for 2012/13 reported here include only those students that are included in the value-added model and are limited to the same grade range as reported for the value-added estimates (i.e. elementary, middle and high).

## Atlanta Heights Charter School

### Key Findings

- The value-added estimate of the school’s impact on a student’s average achievement across all subjects is -0.1152 in elementary grades and -0.0143 in middle grades, meaning that Atlanta Heights Charter School is below the state average in elementary grades and not significantly different than the state average in middle grades.
- In general, Atlanta Heights Charter School is strong in middle school ELA and science, but its performance in elementary math and reading is weak relative to both the district and the state.
- Atlanta Heights Charter School’s 2013/14 performance in elementary and middle grades is generally comparable to performance in 2012/13. Performance in middle school social studies in 2013/14 is improved relative to performance in 2012/13.
- The school’s contribution to student achievement is:
  - above the district and state average in middle school ELA and above the district average in middle school science
  - below the district and state average in reading and math in elementary grades and below the state average in elementary science and middle school social studies.
  - indistinguishable from the district and state average in ELA and social studies in elementary grades and in reading and math in middle grades.

### Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: -0.1152 Elementary / -0.0143 Middle

Overall District Effect: -0.0446 Elementary / -0.0331 Middle

Atlanta Heights’s contribution to an elementary student’s average achievement across all five CRCT-tested subjects is less than that of the average elementary school in the state and district, and its contribution to a middle school student’s cross-subject average achievement is not statistically different from the average middle school in the state and district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school’s effect on student achievement in each subject area.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)					Student Growth Percentiles		
	School Effect	State Percentile (higher is better)	Statistically Different From State Average?	District Rank (lower is better)	Statistically Different From District Average?	School Mean of Individual SGPs	State Percentile (higher is better)	District Rank (lower is better)

Note: statistical significance based on a 95 percent confidence level.

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

Atlanta Height’s performance in elementary and middle grades in 2013/14 is generally on par with its performance in 2012/13. The all-subject elementary school average value added has changed little, moving from -0.106 in 2012/13 to -0.115 in 2013/14. In 2012/13 the all-subject average value-added for middle grades was -0.0678 whereas in 2013/14 it was -0.0143. Performance in middle school social studies in 2013/14 was substantially higher than in 2012/13.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)						Student Growth Percentiles

## Charter Conservatory for Liberal Arts and Technology (CCAT)

### Key Findings

- The value-added estimate of the school’s impact on a student’s average achievement across all subjects is -0.1966 in middle grades, meaning that in the middle grades the performance of Charter Conservatory for Liberal Arts and Technology is significantly below the state average of middle schools. The value-added estimates in Analytic Geometry, Physical Science and U.S. History are also below the state and district averages.
- In general, the Charter Conservatory for Liberal Arts and Technology is weak in all subjects except for reading at the middle school level and is also weak in Analytic Geometry, Physical Science and U.S. History at the high school level, relative to both the state and the district.
- Charter Conservatory for Liberal Arts and Technology’s performance in middle grades in 2013/14 is generally lower than in 2012/13; its performance in high school is roughly comparable to its performance in 2012/13.
- The school’s contribution to student achievement is:
  - below the state and district averages in middle school math, science and social studies and in Analytic Geometry, Physical Science and U.S. History.
  - indistinguishable from the district and state average in middle school reading and in 9th Grade Literature and Biology.

### Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: -0.1966 Middle

Overall District Effect: -0.0331 Middle

Charter Conservatory for Liberal Arts and Technology’s contribution to a middle school student’s cross-subject average achievement is lower than the average middle school in the state or district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school’s effect on student achievement in each subject area.

In all three of the five measured subjects, CCAT’s contribution to a high school student’s achievement is lower than both the average high school in the district and the average high school in the state.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)					Student Growth Percentiles

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

Charter Conservatory for Liberal Arts and Technology’s performance in 2013/14 is generally lower in the middle grades relative to its performance in 2012/13. The all-subjects average contribution to achievement of middle school students was -0.1966 in 2013/14 compared to 0.0368 in 2012/13. In high school, results were mixed, with improvement in the school’s contribution to student achievement in 9th Grade Literature and little change in the contribution to student achievement in Physical Science.

## Cherokee Charter Academy

### Key Findings

- The value-added estimate of the school’s impact on a student’s average achievement across all subjects is -0.1228 in elementary grades and 0.0727 in middle grades, meaning that Cherokee Charter Academy is below the state average in elementary grades and above the state average in middle grades. The school’s contribution to student achievement in 9th Grade Literature, Biology and Coordinate Algebra are all not significantly different from district and state averages.
- In general, Cherokee Charter Academy’s performance is strong in middle school social studies, but its performance in elementary school math and science is weak relative to both the district and the state.
- Cherokee Charter Academy’s performance in 2013/14 is generally better than in 2012/13 in the middle grades and generally weaker in the elementary grades in 2013/14 compared to 2012/13.
- The school’s contribution to student achievement is:
  - above the district and state average in middle school social studies, above the state average in middle school ELA, and above the district average in middle school science.
  - below the state and district averages in math and science in elementary grades, below the state average in elementary reading and ELA, and below the district average in math in the middle grades.
  - indistinguishable from the district and state averages in elementary social studies, middle school reading, 9<sup>th</sup> Grade Literature, Biology, and Coordinate Algebra.

### Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: -0.1228 Elementary /0.0727 Middle  
 Overall District Effect: -0.0561 Elementary / 0.0137 Middle

Cherokee Charter Academy’s contribution to an elementary student’s average achievement across all five CRCT-tested subjects is lower than that of the average elementary school in the state and district, and its contribution to a middle school student’s cross-subject average achievement is higher than that of the average middle school in the state and district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school’s effect on student achievement in each subject area.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)					Student Growth Percentiles

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

Cherokee Charter Academy’s performance in 2013/14 is generally weaker in the elementary grades relative to 2012/13. In 2013/14 the school’s cross-subject contribution to student achievement in the elementary grades was -0.1228 whereas in 2012/13 it was 0.0554. In contrast, Cherokee Charter Academy’s performance in the middle grades in 2013/14 was generally better than in 2012/13. In 2013/14 Cherokee Charter Academy’s cross-subject average contribution to student achievement in middle grades was 0.0727, whereas in 2012/13 it was -0.0943. Cherokee Charter Academy did not serve any high school grades in 2012/13, and therefore it is not possible to make any year-to-year comparisons at the high school level.

## Coweta Charter Academy

### Key Findings

- The value-added estimate of the school’s impact on an elementary student’s average achievement across all subjects is 0.0491, meaning that Coweta Charter Academy’s performance is indistinguishable from the state average and greater than the district average of elementary schools. In middle school the school’s contribution to student achievement averaged across all subjects is -0.0017, meaning that Coweta Charter Academy’s contribution to student achievement is not statistically different from either the state average or the district average of middle schools.
- In general, Coweta Charter Academy’s strengths include elementary ELA and middle school reading.
- Coweta Charter Academy’s performance in the elementary grades in 2013/14 is generally on par with its performance in 2012/13.
- The school’s contribution to student achievement is:
  - above the district average in elementary ELA and above the state average in middle school reading.
  - lower than the state and district average in middle school math and social studies.
  - indistinguishable from the district and state averages in elementary reading, elementary math, elementary science, elementary social studies, middle school ELA and middle school science.

### Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: 0.0491 Elementary/-0.0017 Middle

Overall District Effect: -0.0424 Elementary/0.0153 Middle

Coweta Charter Academy’s contribution to an elementary student’s average achievement across all five CRCT-tested subjects is indistinguishable from the average elementary school in the state but higher than that of the average elementary school in the district. The school’s contribution to student achievement averaged across all middle school subjects is indistinguishable from both the average middle school in the state and the average middle school in the district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school’s effect on student achievement in each subject area.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)					Student Growth Percentiles		
	School Effect	State Percentile (higher is better)	Statistically Different From State Average?	District Rank (lower is better)	Statistically Different From District Average?	School Mean of Individual SGPs	State Percentile (higher is better)	District Rank (lower is better)

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

Coweta Charter Academy’s performance in elementary grades in 2013/14 is generally equivalent to their performance in 2012/13. In 2013/14 the school’s cross-subject contribution to student achievement in the elementary grades was 0.0491 and in 2012/13 it was 0.1291. In both years, its contribution to student achievement averaged across subjects at the elementary level ranked in the top 2 out of 20 schools. However, performance was somewhat weaker in both elementary reading and ELA relative to the prior year. The school did not offer any middle school grades in 2012/13, and thus no year-to-year comparisons can be made at the middle school level.

## Fulton Leadership Academy

### Key Findings

- The value-added estimate of the school’s impact on a student’s average achievement across all subjects in middle school is 0.1033, meaning that Fulton Leadership Academy is above both the state and district average of all middle schools. The school’s contributions to student achievement in 9th Grade Literature and Coordinate Algebra are both above state averages.
- In general, Fulton Leadership Academy’s strengths include middle school reading, ELA and social studies as well as 9th Grade Literature and Coordinate Algebra.
- Relative to 2012/13, Fulton Leadership Academy’s performance in 2013/14 is generally comparable to its performance in 2012/13. However, in middle school social studies and math the estimated contribution to student achievement is lower than in the prior year.
- The school’s contribution to student achievement is:
  - above the district and state average in middle school reading, middle school ELA, middle school social studies and 9th Grade Literature as well as above the state average in Coordinate Algebra.
  - indistinguishable from both the district and state averages in middle school math and science and high school Physical Science and indistinguishable from the district average in Coordinate Algebra.

### Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: 0.1033 Middle

Overall District Effect: 0.0129 Middle

Fulton Leadership Academy’s contribution to a middle school student’s cross-subject average achievement is greater than that of the average middle school in the state and district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school’s effect on student achievement in each subject area.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)					Student Growth Percentiles

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

Fulton Leadership Academy’s performance in 2013/14 is generally comparable to its performance in 2012/13. In 2012/13 its average contribution to student achievement across all five middle school subjects tested on the CRCT was 0.1670 and in 2013/14 it was 0.1033. Its contribution to student achievement in middle school math fell from 0.1392 to -0.0113 and its contribution to student achievement in middle school social studies fell from 0.3217 in 2012/13 to 0.1128 in 2013/14. Fulton Leadership Academy did not offer any high school grades in 2012/13, so no year-to-year comparisons can be made at the high school level.

## Georgia Connections Academy

### Key Findings

- The value-added estimate of the school’s impact on a student’s average achievement across all subjects is -0.1212 in elementary grades and -0.0674 in middle grades, meaning that Georgia Connections Academy’s performance is below the state average in elementary and middle grades. The school’s estimated contribution to student achievement exceeds the state average in 9th Grade Literature and American literature, but is below the state average in Analytic Geometry, Biology, Economics, Physical Science and U.S. History.
- In general, Georgia Connections Academy’s strengths include elementary reading, middle school reading and ELA, and 9th Grade Literature and American Literature in high school. However, its performance in elementary and middle school math, elementary and middle school science, middle school social studies and high school Analytic Geometry, Biology, Economics and U.S. History is weak relative to the state.
- Relative to 2012/13, Georgia Connections Academy’s performance appears to be somewhat weaker in 2013/14, with substantial declines in elementary social studies and three high school subjects.
- The school’s contribution to student achievement is:
  - above the state average in elementary reading, middle school reading, middle school ELA, 9th Grade Literature, and American Literature.
  - below the state average in elementary math, elementary science, middle school math, middle school science, middle school social studies, high school Analytic Geometry, Biology, Economics, Physical Science and U.S. History.
  - indistinguishable from the state average in elementary ELA, elementary social studies, and high school Coordinate Algebra.

### Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: -0.1212 Elementary / -0.0674 Middle

Georgia Connections Academy’s contribution to an elementary student’s average achievement across all five CRCT-tested subjects is lower than that of the average elementary school in the state, and its contribution to a middle school student’s cross-subject average achievement is also lower than that of the average middle school in the state. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school’s effect on student achievement in each subject area. In high school, Georgia Connections outperformed the state in 9<sup>th</sup> Grade Literature and American Literature but performed below the state average in Analytic Geometry, Biology, Economics, Physical Science, and U.S. History. Performance was indistinguishable in Coordinate Algebra.

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

Georgia Connections Academy’s performance in 2013/14 appears to be somewhat weaker than its performance in 2012/13, though in only four subjects, elementary social studies, high school Biology, high school Economics and high school U.S. History does the decline exceed 0.15 standard deviations. In 2012/13 the school’s cross-subject average contribution to student achievement in the elementary grades was 0.0029, whereas in 2013/14 it was -0.1212. The school’s cross-subject average contribution to student achievement in middle school grades was -0.0127 in 2012/13 and -0.0674 in 2013/14.

## Ivy Preparatory Academy at Gwinnett

### Key Findings

- The value-added estimate of the school’s impact on a student’s average achievement across all subjects is -0.0027 in middle grades, meaning that in the middle grades the Ivy Preparatory Academy at Gwinnett is not significantly different than the state average of middle schools. The school’s estimated contribution to student achievement in 9th Grade Literature is not significantly different from either the state or district averages.
- In general, the Ivy Preparatory Academy at Gwinnett is strong in middle school math, but its performance in middle school science is weak relative to the district and state.
- Ivy Preparatory Academy at Gwinnett’s performance in 2013/14 is generally comparable to its performance in 2012/13.
- The school’s contribution to student achievement is:
  - above the state average in middle school math.
  - below the district average in middle school reading, ELA, math, science and social studies.
  - indistinguishable from the district and state average in 9th Grade Literature.

### Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: -0.0027 Middle

Overall District Effect: 0.1041 Middle

Ivy Preparatory Academy at Gwinnett’s contribution to a middle school student’s cross-subject average achievement is not statistically different from the average middle school in the state, but it is below the average middle school in the district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school’s effect on student achievement in each subject area.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)					Student Growth Percentiles

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

Ivy Preparatory Academy at Gwinnett’s performance in 2013/14 is generally comparable to its performance in 2012/13. The estimated impact on student achievement averaged across all subjects was -0.0027 in 2013/14 compared to 0.0077 in 2012/13. Changes in estimated performance in specific subjects were generally not large.

## Ivy Preparatory Academy at Kirkwood for Girls

### Key Findings

- The value-added estimate of the school’s impact on a student’s average achievement across all subjects is -0.3300 in elementary grades and -0.0171 in middle grades, meaning that Ivy Preparatory Academy at Kirkwood for Girls is below the state and district averages in elementary grades and not significantly different than the state and district averages in middle grades.
- In general, Ivy Preparatory Academy at Kirkwood for Girls’ strengths include middle school reading, but its performance in elementary reading, ELA and science are weak relative to the state and district.
- Ivy Preparatory Academy at Kirkwood for Girls’ performance in 2013/14 is generally weaker than in 2012/13. The estimated impact on student achievement averaged across all subjects in elementary school was -0.3300 in 2013/14 compared to -0.0757 in 2012/13. In middle school the cross-subject average contribution to student achievement was 0.0339 in 2012/13 and -0.0171 in 2013/14.
- The school’s contribution to student achievement is:
  - above the state average in middle school reading.
  - below the district and state average in elementary school reading, ELA and science, and below the state average in elementary math and in middle school science and social studies.
  - indistinguishable from the district and state average in elementary social studies and middle school ELA and math.

### Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: -0.3300 Elementary / -0.0171 Middle

Overall District Effect: -0.0624 Elementary / -0.0225 Middle

Ivy Preparatory Academy at Kirkwood for Girls’ contribution to an elementary student’s average achievement across all five CRCT-tested subjects is below that of the average elementary school in the state and district. Its contribution to a middle school student’s cross-subject average achievement is not statistically different from the average middle school in the state and district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school’s effect on student achievement in each subject area.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)					Student Growth Percentiles

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

Ivy Preparatory Academy at Kirkwood for Girls' performance in 2013/14 is generally weaker than in 2012/13. The estimated impact on student achievement averaged across all subjects in elementary school was -0.3300 in 2013/14 compared to -0.0757 in 2012/13. In middle school the cross-subject average contribution to student achievement was -0.0171 in 2013/14, which is not substantially different from the estimated contribution in 2012/13 of 0.0339. The largest declines were in elementary reading, ELA, science and social studies.

## Ivy Preparatory Young Men’s Leadership Academy

### Key Findings

- The value-added estimate of the school’s impact on a student’s average achievement across all subjects is -0.3223 in elementary grades and -0.0616 in middle grades, meaning that Ivy Preparatory Young Men’s Leadership Academy is below both the state and district average in elementary grades and not significantly different from the state and district average in middle grades.
- In general, Ivy Preparatory Young Men’s Leadership Academy’s performance in elementary reading, math and science and in middle school social studies is weak relative to the state and district. However, its contribution to student achievement in middle school math is strong, exceeding both the state and district averages.
- Performance at Ivy Preparatory Young Men’s Leadership Academy generally declined in the elementary grades relative to the prior year, while performance in some middle school subjects showed improvement from 2012/13.
- The school’s contribution to student achievement is:
  - below the state and district averages in elementary reading, elementary math, elementary science and middle school social studies, and below the state average in middle school science.
  - above the state average in middle school reading and above both the state and district averages in middle school math.
  - indistinguishable from the district and state average in elementary ELA and social studies as well as in middle school ELA.

### Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: -0.3223 Elementary / -0.0616 Middle

Overall District Effect: -0.0624 Elementary / - 0.0225 Middle

Ivy Preparatory Academy Young Men’s Leadership Academy’s contribution to an elementary student’s average achievement across all five CRCT-tested subjects is less than the average elementary school in the state and district, and its contribution to a middle school student’s cross-subject average achievement is not statistically different than that of the average middle school in the state and district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school’s effect on student achievement in each subject area.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)					Student Growth Percentiles		
	School Effect	State Percentile (higher is better)	Statistically Different From State Average?	District Rank (lower is better)	Statistically Different From District Average?	School Mean of Individual SGPs	State Percentile (higher is better)	District Rank (lower is better)

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

Ivy Preparatory Academy Young Men’s Leadership Academy’s performance in 2013/14 is generally lower in the elementary grades relative to its performance in 2012/13. The cross-subject average contribution to student achievement in elementary grades fell from -0.0589 in 2012/13 to -0.3223 in 2013/14. In middle grades the school’s overall performance in 2013/14 was roughly on par with its performance in the prior year; the cross-subject average contribution to student achievement in the middle grades was -0.0616 compared to -0.1695. There were, however, substantial improvements in the school’s estimated contribution to student achievement in middle school reading and ELA.

## Mountain Education Center

### Key Findings

- Mountain Education Center’s contribution to student achievement exceeds the state average in Math II, but falls below the state average in American Literature. Since the school serves students from multiple counties it does not have a district comparison group.
- Compared to 2012/13, Mountain Education Center had a substantial increase in the contribution to student achievement in Math II but had a large decrease in 9th Grade Literature.
- The school’s contribution to student achievement is:
  - above the state average in Math II.
  - below the state average in American Literature.
  - indistinguishable from the state average in 9th Grade Literature, Biology, Coordinate Algebra, Economics and Physical Science and U.S. History.

### General Characteristics

<i>School Name</i>	<i>Calendar Year Opened</i>	<i>EMO Affiliation</i>	<i>Grades</i>	<i>Curriculum Focus</i>	<i>School Year</i>	<i>Single-Gender School</i>	<i>Virtual/Online School</i>	<i>Serves Multiple Counties</i>	<i>Parental Involvement Requirement</i>	<i>Enrollment Restrictions</i>

### Value-Added and SGP Results Summary by Grade Level and Subject

Mountain Education Center’s contribution to student achievement is less than the state average in American Literature and greater than the state average in Math II. The table below includes the school’s effect on student achievement in each subject area.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)					Student Growth Percentiles		
	School Effect	State Percentile (higher is better)	Statistically Different From State Average?	District Rank (lower is better)	Statistically Different From District Average?	School Mean of Individual SGPs	State Percentile (higher is better)	District Rank (lower is better)

Note: statistical significance based on a 95 percent confidence level.

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

Mountain Education Center’s performance in 2013/14 was similar to its performance in 2012/13 in most subjects. However, the school’s contribution to student achievement in Math II rose from -0.0506 in 2012/13 to 0.3140 in 2013/14. Mountain Education Center’s contribution to student achievement in 9th Grade Literature declined from 0.4303 to 0.0498. It also experienced a smaller decline in American Literature from -0.0020 to -0.1565.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)						Student Growth Percentiles

## Odyssey School (Including Georgia Cyber Academy)

### Key Findings

- The value-added estimate of the school’s impact on a student’s average achievement across all subjects is -0.0694 in elementary grades and -0.0256 in middle grades, meaning that Odyssey School is below the state average in both elementary and middle school. The value-added estimates in 9th Grade Literature and American Literature are above state averages but below state averages for Analytic Geometry, Biology, Coordinate Algebra, Economics and Physical Science. Because Georgia Cyber Academy serves students throughout Georgia, the school does not have a district comparison group.
- In general, Odyssey School’s strengths include reading and ELA at all levels and its weaknesses include math, science, and social studies at all levels.
- The Odyssey School’s performance in the elementary grades in 2013/14 is comparable to their performance in 2012/13. In middle school, the Odyssey School’s performance improved overall.
- The school’s contribution to student achievement is:
  - above the state average in elementary reading and ELA, middle school reading and ELA and 9th Grade Literature and American Literature at the high school level.
  - below the state average in elementary math and science, middle school math, science, and social studies and high school Analytic Geometry, Biology, Coordinate Algebra, Economics, Physical Science and U.S. History.

### Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: -0.0694 Elementary / -0.0256 Middle

Odyssey School’s contribution to an elementary student and a middle school student’s average achievement across all five CRCT-tested subjects is less than the average elementary and middle school in the state. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school’s effect on student achievement in each subject area.

At the high school level, the school’s contribution to student achievement is above the state average in 9th Grade Literature and American Literature, but below the state average in Analytic Geometry, Biology, Coordinate Algebra, Economics, Physical Science and U.S. History.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)					Student Growth Percentiles

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

The Odyssey School’s performance in the elementary grades in 2013/14 is on par with their performance in 2014/15. In 2013/14 their cross-subject average contribution to student achievement in elementary was -0.0694 compared to -0.0559 in 2012/13. In middle school, the school’s performance generally improved in 2013/14; the cross-subject average contribution to student achievement in middle grades was -0.3500 in 2012/13 and -0.0256 in 2013/14. At the high school level, results were generally similar from one year to the next.

## Pataula Charter Academy

### Key Findings

- The value-added estimate of the school’s impact on a student’s average achievement across all subjects is -0.0091 in elementary grades and -0.0332 in middle grades, meaning that Pataula Charter Academy is not significantly different than the state average in elementary and middle grades. At the high school level, the value-added estimates in 9th Grade Literature, Analytic Geometry and Physical Science are all above the state average.
- In general, Pataula Charter Academy’s performance is strong in middle school social studies relative to the five-county area it serves, but its performance in middle school science is weak relative to the state average. The school’s performance is also strong in high school 9th Grade Literature, Physical Science, and Analytic Geometry where its contribution to student achievement exceeds the state average.
- Relative to 2012/13, Pataula Charter Academy’s performance is generally equivalent in 2013/14.
- The school’s contribution to student achievement is:
  - above the five-county average in middle school social studies, above the state and five-county averages in Physical Science and above the state average in 9th Grade Literature and Analytic Geometry.
  - below the state average in middle school science.
  - indistinguishable from both the state and five-county average in all five CRCT-tested subjects in elementary and in middle school reading, ELA and math as well as in Coordinate Algebra at the high school level.

### Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: -0.0091 Elementary / -0.0332 Middle  
 Overall District Effect: -0.0207 Elementary/-0.0540 Middle

Pataula Charter Academy’s contribution to an elementary student and a middle school student’s average achievement across all five CRCT-tested subjects is not statistically different from the average elementary and middle school in the state and five surrounding county districts. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school’s effect on student achievement in each subject area. At the high school level, Pataula Charter Academy’s contribution to student achievement exceeded the state and five-county district averages in 9th Grade Literature, Analytic Geometry and Physical Science; it was not significantly different from either the state or five-county averages in Coordinate Algebra.

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

Relative to 2012/13, Pataula Charter Academy’s performance is generally equivalent in 2013/14. The school’s cross-subject average contribution to student achievement in elementary was virtually unchanged, moving from -0.0045 in 2012/13 to -0.0091 in 2013/14. Similarly, there was little change in the cross-subject average contribution to student achievement; in 2012/13 it was 0.0025 and in 2013/14 it was -0.0332. No year-to-year comparison can be made at the high school level because Pataula Charter Academy did not serve any high school grades in 2012/13.

<sup>20</sup> Only three counties took the Analytical Geometry exam: Calhoun, Early and Randolph County Schools

## Provost Academy

### Key Findings

- In general, Provost Academy performance in American Literature, Analytic Geometry, Biology, Coordinate Algebra, Economics, Math II, Physical Science and U.S. History is weak relative to the state. Because the school serves students throughout the state it does not have a district comparison group.
- Provost Academy’s performance in 2013/14 is somewhat weaker than in 2012/13.
- The school’s contribution to student achievement is:
  - below the state average in American Literature, Analytic Geometry, Biology, Coordinate Algebra, Economics, Math II, Physical Science and U.S. History.
  - indistinguishable from the state average in 9th Grade Literature.

### General Characteristics

<i>School Name</i>	<i>Calendar Year Opened</i>	<i>EMO Affiliation</i>	<i>Grades</i>	<i>Curriculum Focus</i>	<i>School Year</i>	<i>Single-Gender School</i>	<i>Virtual/Online School</i>	<i>Serves Multiple Counties</i>	<i>Parental Involvement Requirement</i>	<i>Enrollment Restrictions</i>
Provost Academy	2012	No	9-12	Online Curriculum	Normal	No	Yes	Online	Not Specified	Students residing in State of GA

### Students Served

<i>School Name</i>	<i>Pct. Female</i>	<i>Pct. White</i>	<i>Pct. Black</i>	<i>Pct. Hispanic</i>	<i>Pct. Other</i>	<i>Pct. FRL</i>	<i>Pct. LEP</i>	<i>Pct. SWD</i>	<i>Pct. Gifted</i>
Provost Academy	51.1	28.5	62.4	1.6	7.0	15.9	0.0	11.6	0.0

### Value-Added and SGP Results Summary by Grade Level and Subject

Provost Academy’s contribution to student achievement was below the state average in American Literature, Analytic Geometry, Biology, Coordinate Algebra, Economics, Math II, Physical Science and U.S. History; it was not significantly different from the state average in 9th Grade Literature.

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)					Student Growth Percentiles		
	School Effect	State Percentile (higher is better)	Statistically Different From State Average?	District Rank (lower is better)	Statistically Different From District Average?	School Mean of Individual SGPs	State Percentile (higher is better)	District Rank (lower is better)
<i>High</i>								
9 <sup>th</sup> Grade Literature	-0.0349	38	No			69	99	
American Literature	-0.1480	14	Lower			37	5	
Analytic Geometry	-0.3882	2	Lower					
Biology	-0.1998	13	Lower			35	15	
Coordinate Algebra	-0.3199	3	Lower			34	4	
Economics	-0.4493	5	Lower			61	79	
Math II	-0.4450	4	Lower			37	10	
Physical Science	-0.3824	3	Lower			27	2	
U.S. History	-0.4703	5	Lower			26	7	

Note: statistical significance based on a 95 percent confidence level.

### Comparison of 2013/14 and 2012/13 Value-Added and SGP Summary Results

Provost Academy’s performance in 2013/14 is generally somewhat weaker than in 2012/13. Its estimated contribution to student achievement fell by more than 0.15 standard deviations in three subjects and increased by more than 0.15 standard deviations in just one subject..

Grade Level and Subject	Value-Added (Controls for Student Demographics and Prior Test Scores)						Student Growth Percentiles			
	2012/13			2013/14			2012/13		2013/14	
	School Effect	District Rank (lower is better)	Statistically Different From District Average?	School Effect	District Rank (lower is better)	Statistically Different From District Average?
