## Executive Summary

A total of 15 state charter schools operated in Georgia during the 2014-15 school year. Two of the schools, Georgia Cyber Academy and the Odyssey School, had previously appeared as a single institution in the Georgia Department of Education's administrative records. Thus, this report documents the performance of 15 state charter schools in the 2014-15 school year and also provides performance data for 2013-14 and 2012-13 for 13 the state charter schools, other than Georgia Cyber and Odyssey, which operated in 2014-15. Key findings are:

State charter schools are diverse and many provide learning environments that differ from those of traditional public schools. State charter schools vary along multiple dimensions, including grade levels, student demographics, instructional mode (face-to-face or virtual), curricular focus and geographic area served. Four of fifteen schools serve only elementary and middle grades, another five serve elementary, middle and at least some high school grades, three serve both middle and high grades, one serves only middle school students and two only serve grades 9-12. Four of the fifteen are single-gender schools, and African-American enrollment at five schools is 95 percent or more. One school has over 20 percent of students classified as gifted, while four report no gifted students. Three of the fifteen schools provide fully online course offerings while the remaining 12 provide face-to-face instruction exclusively. The three fully online virtual schools and one "brick-and-mortar" school enroll students from throughout the state, one school enrolls students who reside within a five-county region, and the remaining ten enroll students from a single school district only.

The majority of state charter schools serving elementary grades perform as well as the average public elementary school in the state. The estimated contribution to student achievement in grades 4 and 5 across all four Milestones-tested subjects (math, ELA, science and social studies) was not significantly different from the state average for five of the nine state charter schools serving elementary grades. Performance for the other four was significantly below the state average. This cross-subject average masks significant variation across subjects, however. For example, in ELA only two of the nine schools performs below the average elementary school in the state while in math six of the nine are significantly below the state average.

Most state charter schools serving middle grades perform as well or better than the average public middle school in the state. The estimated contribution to student achievement in grades 6-8 averaged across all four Milestones-tested subjects is not significantly different from the state average for seven of the 13 state charter schools that enroll students in one or more of grades $6-8$. The cross-subject average performance of two state charters exceeds that of the average middle school in the state, and the contribution to student achievement for four state charters falls below the state average. Performance of state charters serving middle grades is particularly strong in language arts, with the performance of six schools exceeding the state average and the performance of another six is not significantly different from the state average; only one school's performance in language arts is significantly below the state average. In contrast, performance of state charter schools was relatively weak in science. None of the 13 state charter schools serving middle school students had estimated contributions to student achievement in science that exceeded the state average, the performance of seven schools was not significantly different from the state average and the performance of six fell below the state average. Performance in math and social studies were both quite mixed, with some state charters exceeding the statewide average and some falling below the state average in each subject.

The performance of state charter schools serving high school grades is uneven when compared to the average public high school in the state. Variation across subjects must be interpreted with caution, however, since some state charters have just begun to expand their range of grade offerings into high school and, thus, the sample of schools varies across subject areas. Further, three of the five state charters offering all high school grades ( $9-12$ ) are virtual schools. In $9^{\text {th }}$ Grade Literature, five of nine state charters are performing above the state average and the performance of the other four is not significantly different from the state average. For the five schools with test scores for American Literature, the contribution to student achievement for three schools is not significantly different from the state average while performance of the other two exceeds the state average. For Analytic Geometry four of six schools perform at a level indistinguishable from the state average and two perform below the state average. In Coordinate Algebra, performance of two of nine state charter schools exceeds the state average, performance of six is not significantly different from the state average and the performance of one school falls below the state average. In Biology two of nine schools perform above the state average, performance of four schools is indistinguishable from the state average and performance of the other three schools is significantly below the state average. In Physical Science four of seven schools have estimated contributions to student achievement below the state average and performance of the other three is indistinguishable from the state average. In economics three of four schools fall significantly below the state average and one school is above the state average. Performance is also generally low in U.S. History, with four of six schools performing below the state average and two whose performance is indistinguishable from the state average.

The majority of state charter schools serving elementary grades perform as well as the average elementary school in their district(s). Similar to statewide comparisons, the contribution to student achievement averaged across all four Milestones-tested subjects is not statistically different from the average of all elementary schools in the relevant district for six of eight state charters serving elementary grades. The cross-subject average performance is below that of the average school in the relevant district for the other two state charter schools which enrolled elementary school students.

The performance of most state charter schools serving middle grades is equal to or better than the average of all middle schools in the relevant district(s). Of the eleven state charter schools serving middle grades that are not statewide virtual schools, five perform better than the average of middle schools in their district (based on cross-subject averages of the estimated contribution to student achievement). One performs worse than the average school in their district, and the performance of the other five schools is indistinguishable from the average school in the district.

For a majority of subjects at the high school level, most state charters perform at a level that is indistinguishable from the average school in their district. Of the six state charter schools serving one or more high school grades and with a less than a statewide attendance zone, the performance of one is indistinguishable from the district average in all subjects, two are higher than the district average in one subject and indistinguishable from the district average in all others, two are above average in one subject and below average in one other and the last school is lower than the relevant district average in a single subject.

## I. Introduction and Background

There were 15 state charter schools operating in Georgia during the 2014-15 school year. Although the current State Charter Schools Commission has only been in operation since 2013, a number of the state charter schools have been in existence for several years. Some were originally formed as state chartered special schools or were initially chartered by the original Georgia Charter Schools Commission, which was declared unconstitutional by the Georgia Supreme Court. ${ }^{1}$ Table 1 summarizes information about the 15 schools that operated during the 2014-15 school year, including when the school opened, whether it is affiliated with an education management organization (EMO), grades served, curricular model, school calendar, delivery model (virtual vs. physical classrooms), attendance zone, and any special enrollment requirements (parental participation requirements or gender restrictions). The 15 schools are quite diverse in their structure, mission and service area. For example, three of the 15 state charter schools are virtual schools, and many of the state charter schools target traditionally underserved populations. Four of the schools are single-gender schools. The majority of state charter schools (10 of 15) serve students in a single district/county, one school (Pataula Charter Academy) has an attendance zone that spans multiple counties and the remaining four schools (three of which are virtual schools) serve students from the entire state.

The state charter schools also vary considerably in the populations of students they serve, as illustrated in Table 2. Five of the 15 schools serve almost exclusively African-American students. In contrast, five have student populations in which fewer than 20 percent of students are black or Hispanic. There is considerable diversity in proportions of Limited English Proficiency (LEP) students, students eligible for Free/Reduced-Price Lunch (FRL), Students with Disabilities (SWD) and gifted students as well.

## II. Methodology and Data

## A. Alternative Methods for Evaluating School Performance

In order to evaluate the performance of state charter schools, there are two related challenges that must be addressed. First, like schools chartered by local school districts, state charter schools are schools of choice. As such, students and their parents have made a conscious decision to attend these schools rather than their neighborhood traditional public school. This individual selection process makes simple comparisons of student performance in state charter schools to traditional public schools problematic. Average test scores or other measures of student performance could reflect the attributes of the students and their families, rather than the performance of the school they attend. For example, if more highly motivated students/families select state charter schools, this would impart an upward bias to the measured performance of state charter schools. Conversely, if students who are struggling are more likely to seek out alternatives to their neighborhood traditional public school, this could bias downward the average achievement in state charter schools.

Evaluation of the performance of state charter schools is further complicated by the fact that they frequently serve students from multiple counties and have specialized missions. As noted above, three of the 15 state charter schools are virtual schools, and many of the state charter schools target traditionally underserved populations, such as students at risk of dropping out. This exacerbates the selection problem; greater diversity in school programs will tend to lead to even more sorting across schools. For example, the students who choose a virtual learning environment may differ even more from the typical student in a traditional public school than would a student attending a local "brick and mortar" charter school.

Although state charter schools are particularly diverse, the challenges to evaluating their performance are not unique. The issue of selection arises in the evaluation of locally approved charters, traditional public schools and individual teachers as well. A variety of methods have been employed by state and local education authorities throughout the country to evaluate the effects of schools and teachers on student achievement. While the particulars of each evaluation system vary, the methods can be placed into three general categories: value-added models, student growth percentiles and proficiency benchmarks. ${ }^{2}$

[^1]
## 1. The Value-Added Model Approach

One way to evaluate school performance is to estimate the determinants of individual student test scores using a "value-added" model (VAM) of student achievement. ${ }^{3}$ VAMs typically include statistical controls for observable student characteristics and prior academic performance in order to account for self-selection. Most often factors like free/reduced-price lunch eligibility (a proxy for family income), English language learner status, and disability status are taken into account. ${ }^{4}$ Race, gender, mobility and age are also sometimes included in the model. ${ }^{5}$ This approach has been used by academic researchers to study the impact of charter schools in many jurisdictions including Arizona (Solmon, Paark \& Garcia (2001)), Florida (Sass (2006)), North Carolina (Bifulco and Ladd (2006)) and Texas (Booker, et al. (2007)). It has also been used to evaluate teacher performance in Florida, Louisiana, North Carolina, Ohio, Tennessee and Washington, DC.

In essence, the value-added model predicts what a student's test score would be based on his or her prior test scores and demographic characteristics. The difference between the actual and predicted current test score is a measure of the educational entity's contribution to student achievement. In the context of school-level evaluations, the estimated effect for a school (known as a school fixed effect or school FE) is essentially the difference between actual and predicted test score for each student, averaged over all students in a school.

## 2. The Student Growth Model Approach

Several states, including Colorado, Georgia, Massachusetts and New Jersey, have used student growth models to evaluate teacher performance. ${ }^{6}$ Like value-added models, the student growth model gauges the performance of teachers or schools by comparing the test scores of individual students to a reference standard. In the case of value-added, the benchmark is the expected performance of a student with the same observable characteristics and prior scores. For the student growth model, the standard is the actual performance of other students with the same prior-year test score (or history of test scores). There are two fundamental differences between the value-added model used in this analysis and the student growth model currently employed in Georgia, however. First, Georgia's student growth model does not include explicit

[^2]controls for student characteristics like disability status or eligibility for free/reduced-price lunch. ${ }^{7}$ This means that school-level average student growth measures will reflect both the impact of a school on student learning and the influences of student characteristics that are not accounted for by prior test scores. For example, if students with disabilities typically experience less growth in achievement than do their typical peers who started with the same prior-year test score, a school with an unusually high proportion of students with disabilities would have a lower mean student growth score than an otherwise identical school with fewer students with disabilities. Second, the student growth model approach is based on student performance rankings among students with the same prior-year test score (or history of test scores), not absolute differences in scores across students. This means there is no need to account for differences in the scaling of tests across years and subjects. It also means that student performance is gauged by the ordering of test scores, not by how much one student's score exceeds that of another.

The logic behind the approach is straightforward, though the underlying calculations are complex. ${ }^{8}$ As an example, imagine plotting the distribution of fourth-grade test scores obtained by students who all had the same third-grade test score the prior year. Students are assigned a student growth percentile (SGP) depending on where they fall in that distribution. An SGP of 70 would indicate that 70 percent of students with the same third-grade score in the prior year obtained a lower fourth-grade score. To evaluate individual teachers or schools, either the mean or the median SGP value of all students in the relevant unit is typically used.

## 3. Proficiency Targets

Many state school accountability systems are based in part on whether or not students meet a certain threshold achievement score on tests. For example, about twenty percent of a school's score on Georgia's College and Career Ready Performance Index (CCRPI) is determined by the proportion of students who satisfy content mastery standards established by the state. Points are awarded for "developing," "proficient," and "distinguished" learners, with each category determined by the percentage of students scoring above a certain threshold. ${ }^{9}$ In general, proficiency targets (including those in the CCRPI) and associated threshold scores for determining achievement levels are set by policy makers and focus on absolute performance rather than growth.

The advantage of proficiency targets is that they establish an absolute benchmark and thus all schools could potentially improve from one year to the next. In contrast, both the valueadded and student growth models yield relative measures of school performance. In the case of value-added, schools are compared to the average school in a state. Student growth models yield SGPs for individual students, which by definition have a median value of 50. Therefore, aggregations of student performance to the school level (whether means or medians) are implicitly tied to the median student's performance across the state.

[^3]The downside of achievement levels and associated proficiency targets is that they do not control for student selection into schools. Thus, scores may reflect the abilities of students and the parental support they receive, rather than a school's contribution to student learning. For example, on average, students from more affluent families tend to score higher on achievement exams than do students from lower-income families. Thus, even if the quality of teachers and school leaders were equal across all schools in a state, the schools serving more advantaged students would tend to receive higher scores on a proficiency-target metric.

Given the problems associated with the use of proficiency targets, this report focuses on value-added and student-growth estimates to evaluate the performance of state charter schools. However, descriptive evidence in the form of proportions of students meeting proficiency standards are reported in order to provide a picture of the current achievement level of students attending state charter schools.

## B. Data

To estimate the value-added model and derive estimates of the impact of each school on student achievement, data from Georgia's Pre-Kindergarten-20 longitudinal data system, known as GA•AWARDS (Georgia's Academic and Workforce Analysis and Research Data System) are employed. GA•AWARDS is maintained by the Governor's Office of Student Achievement (GOSA) and combines data from the Georgia Department of Education (GaDOE) with data from eight other state agencies: Department of Labor (workforce data), Department of Early Care and Learning ("Bright From the Start" Georgia's pre-K program), Georgia Student Finance Commission (financial aid), Governor's Office of Student Achievement, Georgia Professional Standards Commission (teacher licensure), Technical College System of Georgia, University System of Georgia and the State Charter Schools Commission. GA•AWARDS also includes data from the Georgia Independent College Association.

For grades 3-8, achievement is measured by scores on the Milestones end-of-grade exam in English Language Arts (ELA), Math, Science and Social Studies. Prior to 2014-15 Georgia used the Criterion Referenced Competency Test (CRCT) to evaluate student achievement in elementary and middle grades. Thus, prior-year scores for each of four subjects, which are used to control for student ability and prior educational inputs, come from the CRCT. ${ }^{10}$ To minimize problems associated with different scales across tests, all scale scores (both current-year Milestones scores and prior-year CRCT scores) are converted to normal-curve equivalents (z-scores) based on the testing population in the state for each grade, year, and subject. Thus, school effect estimates are measured in standard deviation units or "effect sizes."

For high school students, Milestones End-of-Course (EOC) test scores in Math (Analytic Geometry, Coordinate Algebra), ELA (9th Grade Literature and Composition, American Literature and Composition), Science (Biology, Physical Science) and Social Studies (U.S. History, Economics) are employed. For the analysis of EOC test scores, $8^{\text {th }}$ grade CRCT scores in all five subjects are used as controls. Because the CRCT does not vertically align scale scores over time, and the CRCT and End-of-Course Tests can vary from year to year, scores are normalized to have a mean of zero and standard deviation of one.

[^4]In addition to prior test scores, the value-added model includes the following student characteristics as controls: gender, foreign-born indicator, race/ethnicity, limited English proficiency (LEP) enrollment, free/reduced-price lunch eligibility, gifted status, primary-language-not-English indicator, disability status ( 15 specific disability categories), number of schools attended in the current year, an indicator for students who changed schools from the prior year, number of disciplinary incidents in the prior year, attendance in the prior year and the difference between a student's age (in months) and the modal age of students in the same grade. ${ }^{11,12}$

Individual-level student growth percentiles were calculated by the GaDOE and provided to the GA•AWARDS staff who, in turn, assigned anonymous student codes. A very small number of students with SGPs could not be matched to records in the GA•AWARDS system and were thus excluded from the analysis. It is important to note that SGPs are not calculated by the GaDOE for students who repeat a grade or skip a grade because the pool of students who took the same grade level exam in the prior year is too small to form a valid SGP.

For both the value-added and student growth model analyses, students were assigned to schools using the "Full Academic Year" (FAY) rule used in the CCRPI calculations. For grades 3-8, FAY was determined by the number of calendar days between the start of each school's school year and the end of the state Milestones testing window. For grades 9-12, FAY for each school was measured by the calendar days between the start and end of the school year. For each student, the school of longest attendance was determined based on individual attendance records. The total calendar days enrolled at the school of longest attendance was then determined. If a student's calendar days of enrollment were at least 65 percent of the FAY, they were assigned to that school for the purposes of determining value-added school effects and mean or median school SGPs.

## III. Results - All State Charters

## A. Proficiency Targets

Proficiency percentages obtained by students in state charters on the Milestones EOG and EOC exams are those reported publicly by the GaDOE and are presented in the individual school summaries. ${ }^{13}$ Statewide and district averages are also provided for reference. ${ }^{14}$ It is important to emphasize that proficiency percentages reflect the ability and motivation of students, family resources and the quality of education received in prior years. As such, they

[^5]provide a picture of the current achievement level of students, not necessarily the impact a student's current school has had on their achievement within the previous year.

When considering the proficiency percentages, a few patterns emerge at the elementary and middle school levels (grades 3-5 and 6-8). First, there is considerable variation across subjects and across grades, even within a school. Second, three state charter schools stand out as having large proportions of struggling students across multiple subjects/grades. Atlanta Heights and Ivy Preparatory Young Men's Leadership Academy each have 50 percent or more of their students in the "Beginning Learner" category for both math and ELA in multiple grade levels. Similarly, Provost Academy has over half of their students in the Beginning Learner category in six courses: $9^{\text {th }}$-Grade Literature, Coordinate Algebra, Analytic Geometry, Biology, Physical Science, U.S. History and Economics. At the other end of the scale, Cherokee Charter Academy has 8 grade/subject combinations in which 15 percent or more of their students are in the top-level "distinguished" category. The next closest is Coweta Charter Academy with five grade/subjects in which 15 percent of students are classified as "Distinguished."

While proficiency targets are important to show a school's absolute performance, examining student growth within a school year provides a stronger indication of the school's impact on student learning. The next section provides an overview of the value-added and student growth estimates that provide a more complete picture of a school's impact.

## B. Value-Added and Student Growth Model Estimates

By construction, the average school at a given grade grouping (elementary, middle or high school) in Georgia has a school effect of zero in the value-added model (controlling for student characteristics). The performance of each school in a given grade grouping is measured relative to this average. Thus, a positive estimated value for an elementary school's effect indicates that students attending that school experience greater growth in achievement than do students with the same observable characteristics at the average elementary school in the state. Negative values do not mean that the achievement of the school's students fell during the year. Instead, a negative school effect indicates the gap between that school's contribution to student achievement and the contribution of the average school (measured in standard deviation units). For example, a value of -0.10 means that a school's contribution to student achievement is 0.10 standard deviations below that of the average school in the state. In the same way, a value of 0.10 means that a school's effect is 0.10 standard deviations above the average school in the state. To put this in perspective, reducing class size in elementary grades by seven students is associated with a 0.10 to 0.20 standard deviation increase in student achievement (Whitehurst \& Chingos (2011)) and the difference in the effectiveness of a rookie teacher and one with three years of experience is about 0.07 standard deviations (Dee \& Wyckoff (2015)).

The value-added effects for schools are statistical estimates and carry some degree of uncertainty. Along with the estimated effects, the value-added model generates a measure of the uncertainty of each school's effect, the estimated standard error. The estimated standard errors can be used to develop confidence intervals around each school's estimated impact on student achievement. With a confidence interval of approximately plus-or-minus two standard errors, one can be 95 percent confident that the true school effect lies in that range. Thus, for example, if a school's estimated effect is 0.5 and the standard error is 0.1 , one can be 95 percent confident that the true effect lies in the range of 0.3 to 0.7 . This information can then be used to determine how confident we are that a given school's performance is above, below, or equal to the average school. The standard errors and confidence intervals will generally be smaller the
larger the number of students per school. The estimated school effect on achievement will vary with the performance of individual students. In a small school, random events like a student having a poor night's sleep or getting "lucky" in their guesses on an exam will have a larger impact on the school's overall effect creating more uncertainty in the true school effect; whereas in a large school, such random events will tend to cancel out. Thus, for example, the Georgia Cyber Academy, which has the largest enrollment of any state charter school, correspondingly tends to have the smallest confidence interval.

Student growth percentiles measure where a student is in the distribution of current achievement relative to students with the same prior-year test score (or history of test scores). Thus, by definition, a score of 50 for a student indicates that about half of students with the same test score last year did better this year and about half did worse. School-level averages of student growth percentiles are reported below. The statewide school-level mean of SGPs is approximately equal to the statewide student median of 50 , which provides a benchmark for comparing scores across schools. ${ }^{15}$ Unlike the value-added model, the student growth percentiles produced from Georgia's model do not include standard errors or confidence intervals at this time. ${ }^{16}$ Without this information, one cannot quantify the likelihood that two schools with different mean or median SGPs are in fact no different. Put differently, absent a measure of precision, we could judge one school as superior to another when in fact they are likely no different.

For both the value-added and student growth models, separate estimates are presented for different grade groupings and for different subjects. In addition, an estimated effect on average performance across all subjects in each grade grouping is produced. Thus, for example, a charter serving grades K-8 receives two value-added scores in math, one for its impact on math achievement of students in elementary grades (grades 4 and 5) and another for its impact on students in middle grades (grades 6-8).

## C. Summary of Findings

A total of 18 figures are presented, four for each of the subjects tested in elementary school, four more for the same subjects in middle school, eight high school courses for which EOCTs are administered, and two for the four-subject averages for elementary and middle school.

[^6]Based on value-added, the majority of state charters perform at a level that is not significantly different from the average school in Georgia in six of the 16 specific grade group/subject combinations: Elementary ELA, Elementary Social Studies, Middle School Science, American Literature, Analytic Geometry and Coordinate Algebra. In four areas, the majority of state charters perform significantly worse than the average school in Georgia: Elementary Math, Physical Science, Economics and U.S. History. Conversely, state charters tend to outperform the average school in $9^{\text {th }}$ Grade Literature. Results are mixed for state charters in the remaining five grade level/subject areas: Elementary Science, Middle Math, Middle ELA, Middle Social Science and Biology. The variation in effectiveness across subject areas could be due to a variety of factors, including teacher quality and instructional methods, which may vary across schools.

The comparisons with state averages provide an overall picture of state charter school performance. More relevant are comparisons between individual state charter schools and other schools (both traditional public schools and local charters) in the geographic areas they serve. Following the 18 figures mentioned above that combine results for all state charters, Section IV presents individual school summaries as well as graphs comparing each school's results with schools in the district it serves (where applicable).

## IV. Results - Individual School Summaries

The following tables summarize both state and district comparisons of performance for each state charter school. Two estimates of school performance are reported, one based on the value-added model and the other derived from the student growth models. The value-added model includes all available student characteristics (plus prior-year test scores) as controls. Results from two other value-added models, one excluding student race/ethnicity and the other including only lagged test scores, are presented in the Technical Appendix. The student growth model yields individual student growth percentiles which are then averaged across students in a school to produce a mean student growth percentile measure of school performance.

For both the value-added and student-growth percentile measures, a state percentile and a district rank are presented. The state percentile represents the proportion of schools in the state with a lower school effect. Thus, for example, a state percentile of 60 means that 60 percent of schools in the relevant grade group rank below the school. District ranks represent the position of a school relative to other schools in the same district offering the same grade group. For example a ranking of " 25 out of 40 " indicates that 24 schools from the relevant district have higher scores and 15 have lower scores.

For state charters serving students from a single school district or county, it is possible to compare their performance to traditional public schools and locally approved charters in the same area. For nearly all state charter students, the relevant public school option is a school in the same district as the district served by their current school. Put differently, a within-district comparison shows how students would likely fare if a state charter were to close. Five of the 15 state charter schools serve students from multiple counties or the entire state. Thus, the following analyses only cover the remaining 10 single-district/county state schools. Of these 10 schools, some do not currently serve all high school grades or have fewer than 15 test takers on some of the EOCT exams. Consequently, the within-district comparisons at the high school level are limited.

For both the value-added and student-growth metrics a comparison between a school's performance in 2014/15 and their performance in 2013/14 and 2012/13 is provided. Estimates for all three years are based on the model used in 2013/14, and thus the performance estimates for 2012/13 reported here differ from those in the 2012/13 State Charter Schools Performance Report. ${ }^{17}$

Each school summary report is structured as follows:

- Key Findings
- General Characteristics
- School Demographics
- Value-Added and SGP Results Summary by Grade Level and Subject
- Comparison of Summary Results from 2013/14 and 2012/13
- Comparison of School Impact
- Proficiency Level

[^7]
## Atlanta Heights Charter School

## Key Findings

- The value-added estimate of the school's impact on a student's average achievement across all subjects is -0.0201 in elementary grades and -0.0053 in middle grades, meaning that Atlanta Heights Charter School's impact on student achievement is not significantly different than the state average in elementary grades or in middle grades.
- In general, Atlanta Heights Charter School is strong in middle school ELA, but its performance in middle school Social Studies is weak relative to both the district and the state. Elementary ELA is weak relative to the district.
- Atlanta Heights Charter School's 2014/15 performance in elementary and middle grades is generally comparable to performance in 2013/14. Performance in elementary school math in 2014/15 improved relative to performance in 2013/14.
- The school's contribution to student achievement is:
- above the district average in middle school ELA
- below the district average in ELA in elementary grades but not different from the state average
- below the district and state average in social studies in middle grades
- indistinguishable from the district and state average in math, science and social studies in elementary grades and in math and science in middle grades.

## Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: -0.0201 Elementary / -0.0053 Middle
Overall District Effect: 0.0129 Elementary / 0.0041 Middle
Atlanta Heights's contribution to an elementary student's average achievement across all four Milestones-tested subjects is not statistically different from the average elementary school in the state and district, and its contribution to a middle school student's cross-subject average achievement is also not statistically different from the average middle school in the state and district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area.

|  | Value-Added(Controls for Student Demographics and Prior Test Scores) |  |  |  |  | Student Growth Percentiles |  |  |

Comparison of 2014/15, 2013/14, and 2012/13 Value-Added and SGP Summary Results
Atlanta Height's performance in elementary and middle grades in 2014/15 is generally on par with its performance in 2013/14. The all-subject elementary school average value added has changed little, moving from -0.1056 in $2012 / 13$ to -0.1152 in 2013/14 to -0.0201 in 2014/15. In 2012/13 the all-subject average value-added for middle grades was -0.0678 , whereas in $2013 / 14$ it was -0.0143 and in 2014/15 it is -0.0053 . Relative performance in elementary school math in 2014/15 was significantly higher than in 2013/14.

## Charter Conservatory for Liberal Arts and Technology (CCAT)

## Key Findings

- The value-added estimate of the school's impact on a student's average achievement across all subjects is 0.0059 in middle grades, meaning that in the middle grades the performance of Charter Conservatory for Liberal Arts and Technology is not significantly different from the state average of middle schools. The value-added estimates in Biology, Coordinate Algebra, Physical Science and U.S. History are also not significantly different from the state and district averages.
- In general, the Charter Conservatory for Liberal Arts and Technology is weak in middle school Math relative to both the state and district but strong in $9^{\text {th }}$ Grade Literature relative to the district.
- Charter Conservatory for Liberal Arts and Technology's performance in middle grades in 2014/15 is generally better than in 2013/14; its performance in high school is better in most subject relative to its performance in 2013/14.
- The school's contribution to student achievement is:
- above the district average in 9th Grade Literature
- below the state and district averages in middle school math
- indistinguishable from the district and state average in middle school ELA, science and social studies and in Biology, Coordinate Algebra, Physical Science and U.S. History.

## Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: 0.0059 Middle
Overall District Effect: 0.0111 Middle
Charter Conservatory for Liberal Arts and Technology's contribution to a middle school student's cross-subject average achievement is also not statistically different from the average middle school in the state and district. . It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area.

In four of the five measured subjects, CCAT's contribution to a high school student's achievement is not statistically different from the average high school in the district and the average high school in the state.

Note: statistical significance based on a 95 percent confidence level. By construction, the statewide average value-added school effect is zero.

Comparison of 2014/15, 2013/14 and 2012/13 Value-Added and SGP Summary Results
Charter Conservatory for Liberal Arts and Technology's performance in 2014/15 is generally better in the middle grades relative to its performance in 2013/14. The all-subjects average contribution to achievement of middle school students was -0.1966 in 2013/14 compared to 0.0368 in 2012/13 and 0.0059 in 2014/2015.

In high school, results were mixed, with improvement in the school's contribution to student achievement in 9th Grade Literature and Physical Science and little change in Biology.

## Cherokee Charter Academy

## Key Findings

- The value-added estimate of the school's impact on a student's average achievement across all subjects is -0.0264 in elementary grades and 0.0910 in middle grades, meaning that Cherokee Charter Academy is not significantly different state and district average in elementary grades and above the state average and district in middle grades.
- In general, Cherokee Charter Academy's performance is strong in middle school ELA and social studies, but its performance in elementary school math is weak relative to both the district and the state.
- Cherokee Charter Academy's performance in 2014/15 is generally comparable to performance in 2013/14 in the middle grades and generally better in the elementary grades in 2014/15 compared to 2013/14.
- The school's contribution to student achievement is:
- above the district and state average in middle school ELA and social studies
- above the district average in middle school science and elementary school ELA.
- below the state and district averages in math in elementary grades,
- indistinguishable from the district and state averages in elementary science and social studies, middle school math,

Value-Added and SGP Results Summary by Grade Level and Subject
Overall School Effect: -0.0264 Elementary / 0.0910 Middle
Overall District Effect: 0.0014 Elementary / 0.0264 Middle
Cherokee Charter Academy's contribution to an elementary student's average achievement across all four Milestones-tested subjects is not statistically different from the average elementary school in the state and district, and its contribution to a middle school student's cross-subject average achievement is higher than that of the average middle school in the state and district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area.

Note: statistical significance based on a 95 percent confidence level. By construction, the statewide average value-added school effect is zero.

## Comparison of 2014/15, 2013/14 and 2012/13 Value-Added and SGP Summary Results

Cherokee Charter Academy's performance in 2014/15 is generally better in the elementary grades relative to 2013/14. In 2014/2015 the school's cross-subject contribution to student achievement in the elementary grades was -0.0264 whereas in 2013/14 it was -0.1228 and in 2012/13 it was 0.0554. Cherokee Charter Academy's performance in the middle grades in 2013/14 was comparable to 2012/13. In 2014/2015 the school's cross-subject contribution to student achievement in middle grades was 0.0910 , whereas in 2013/14 it was 0.0727 and in 2012/13 it was -0.0943 . Cherokee Charter Academy did not serve any high school grades in 2014/15, and therefore it is not possible to make any year-toyear comparisons at the high school level.

## Coweta Charter Academy

## Key Findings

- The value-added estimate of the school's impact on an elementary student's average achievement across all subjects is -0.0404 , meaning that Coweta Charter Academy's performance is indistinguishable from either the state average or the district average of elementary schools. In middle school the school's contribution to student achievement averaged across all subjects is -0.1878 , meaning that Coweta Charter Academy's contribution to student achievement is below both the state average and the district average of middle schools.
- In general, Coweta Charter Academy's strength is elementary ELA, but has weak performance in 3 out 4 subjects in its middle grades.
- Coweta Charter Academy's performance in the elementary grades in 2014/15 is generally on par with its performance in 2013/14 except math performance fell. On the other hand, its performance in the middle grades in 2014/15 is generally worse than its performance in 2013/14
- The school's contribution to student achievement is:
- above the district average in elementary ELA
- lower than the state and district average in elementary math, middle school math, middle school science, and middle school social studies.
- indistinguishable from the district and state averages in elementary social studies, and middle school ELA.

Value-Added and SGP Results Summary by Grade Level and Subject
Overall School Effect: -0.0404 Elementary / -0.1878 Middle
Overall District Effect: -0.0273 Elementary / 0.0014 Middle
Coweta Charter Academy's contribution to an elementary student's average achievement across all four Milestones-tested subjects is indistinguishable from the average elementary school in the state and the average elementary school in the district. The school's contribution to student achievement averaged across all middle school subjects is below both the average middle school in the state and the average middle school in the district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area.

Comparison of 2014/15, 2013/14 and 2012/13 Value-Added and SGP Summary Results
Coweta Charter Academy's performance in elementary grades in 2014/15 is generally equivalent to their performance in 2013/14. In 2014/15 the school's cross-subject contribution to student achievement in the elementary grades was -0.0404 and in 2013/14 it was 0.0491 and in $2012 / 13$ it was 0.1291 . Its performance in elementary math substantially fell in 2014/15 relative to the previous year. In 2014/2015 the school's cross-subject contribution to student achievement in middle grades was -0.1878 , whereas in $2013 / 14$ it was -0.0017 . The cross-subject average contribution to student achievement in middle grades fell from 20113/14 to 2014/15.

## Fulton Leadership Academy

## Key Findings

- The value-added estimate of the school's impact on a student's average achievement across all subjects in middle school is 0.0477 , meaning that Fulton Leadership Academy is not statistically different from the state average and above the district average of all middle schools. The school's contributions to student achievement in high school courses is mixed: 9th Grade Literature and Coordinate Algebra are both above district averages; Coordinate Algebra is also above the state average; American Literature, Analytical Geometry and Biology are indistinguishable from both state and district averages; and lastly, Physical Science and U.S. History are both below the state averages with performance in U.S. History also below the district average.
- In general, Fulton Leadership Academy's strengths include middle school ELA and math as well as Coordinate Algebra, but its performance in middle school science and Physical science is relatively weak in comparison to the state average.
- Relative to 2013/14, Fulton Leadership Academy's performance in 2014/15 is generally comparable to the previous year.
- The school's contribution to student achievement is:
- above the district and state average in middle school ELA, middle school math and Coordinate Algebra.
- above the district average in middle school social studies and 9th Grade Literature.
- below the state average in middle school science and Physical Science.
- indistinguishable from both the district and state averages in American Literature, Analytical Geometry and Biology.

Value-Added and SGP Results Summary by Grade Level and Subject
Overall School Effect: 0.0477 Middle
Overall District Effect: -0.0132 Middle
Fulton Leadership Academy's contribution to a middle school student's cross-subject average achievement is greater than that of the average middle school in the district but indistinguishable from the average middle school in the state. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area.

In three of the seven measured subjects, Fulton Leadership Academy's contribution to a high school student's achievement is not statistically different from the average high school in the district and the average high school in the state. In two of the seven subjects, their contribution to student's achievement is higher than the district average; whereas, in the final two subjects, Fulton Leadership Academy's contribution to a high school student's achievement is lower than state average.

Note: statistical significance based on a 95 percent confidence level. By construction, the statewide average value-added school effect is zero.

## Comparison of 2014/15, 2013/14 and 2012/13 Value-Added and SGP Summary Results

Fulton Leadership Academy's performance in 2014/15 is generally comparable to its performance in 2013/14 in middle grades. In 2012/13 its average contribution to student achievement across all five middle school subjects tested on the CRCT was 0.1670, in 2013/14 it was 0.1033 , and the four middle school subjects tested on the Milestones in $2014 / 15$ was 0.0477 . Fulton Leadership Academy had comparable performance in 2014/15 to 2013/14 in $9^{\text {th }}$ Grade Literature and Physical Science and slight improvement in Coordinate Algebra, the other subjects were not offered in 2013/14.

## Georgia Connections Academy

## Key Findings

- The value-added estimate of the school's impact on a student's average achievement across all subjects is -0.1057 in elementary grades and -0.0570 in middle grades, meaning that Georgia Connections Academy's performance is below the state average in elementary and middle grades. The school's estimated contribution to student achievement exceeds the state average in 9th Grade Literature and American literature, but is below the state average in Economics, Physical Science and U.S. History.
- In general, Georgia Connections Academy's strengths include middle school ELA, and 9th Grade Literature and American Literature in high school. However, its performance in elementary and middle school math and social studies, and high school Economics, Physical Science, and U.S. History is weak relative to the state. Because the school serves students throughout the state it does not have a district comparison group.
- Relative to 2014/15, Georgia Connections Academy's performance appears to be comparable to the previous year.
- The school's contribution to student achievement is:
- above the state average in middle school ELA, 9th Grade Literature, and American Literature.
- below the state average in elementary math, elementary social studies, middle school math, middle school social studies, high school Economics, Physical Science and U.S. History.
- indistinguishable from the state average in elementary ELA, elementary and middle school science, and in high school Analytic Geometry, Biology, and Coordinate Algebra.

Value-Added and SGP Results Summary by Grade Level and Subject
Overall School Effect: -0.1057 Elementary / -0.0570 Middle
Georgia Connections Academy's contribution to an elementary student's average achievement across all four Milestones-tested subjects is lower than that of the average elementary school in the state, and its contribution to a middle school student's cross-subject average achievement is also lower than that of the average middle school in the state. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area.

In high school, Georgia Connections outperformed the state in $9^{\text {th }}$ Grade Literature and American Literature but performed below the state average in Economics, Physical Science, and U.S. History. Performance was indistinguishable in Analytic Geometry, Biology, and Coordinate Algebra.

Note: statistical significance based on a 95 percent confidence level. By construction, the statewide average value-added school effect is zero.

Comparison of 2014/15, 2013/14 and 2012/13 Value-Added and SGP Summary Results
Georgia Connections Academy's performance in 2014/15 appears to be comparable to the previous school year.

In 2012/13 the school's cross-subject average contribution to student achievement in the elementary grades was 0.0029, whereas in 2013/14 it was -0.1212 and -0.1057 in 2014/15. The school's cross-subject average contribution to student achievement in middle school grades was 0.0127 in 2012/13 and -0.0674 in 2013/14 and was -0.0570 in 2014/15.

## Georgia Cyber Academy

## Key Findings

- The value-added estimate of the school's impact on a student's average achievement across all subjects is -0.0937 in elementary grades and -0.1136 in middle grades, meaning that Georgia Cyber's performance is below the state average in elementary and middle grades. The school's estimated contribution to student achievement exceeds the state average in 9th Grade Literature and American literature, but is below the state average in Analytic Geometry, Biology, Economics, Physical Science and U.S. History.
- In general, Georgia Cyber's strengths include 9th Grade Literature and American Literature in high school. However, its performance in all elementary subjects, all middle school subjects, and high school Analytic Geometry, Biology, Economics Physical Science, and U.S. History is weak relative to the state. Because the school serves students throughout the state it does not have a district comparison group.
- The school's contribution to student achievement is:
- above the state average in 9th Grade Literature, and American Literature.
- below the state average in elementary and middle school ELA, elementary and middle school math, elementary and middle school science, elementary and middle school social studies, high school Analytic Geometry, Biology, Economics, Physical Science and U.S. History.
- indistinguishable from the state average in Coordinate Algebra.

Value-Added and SGP Results Summary by Grade Level and Subject
Overall School Effect: -0.0937 Elementary / -0.1136 Middle
Georgia Cyber's contribution to an elementary student's average achievement across all four Milestones-tested subjects is lower than that of the average elementary school in the state, and its contribution to a middle school student's cross-subject average achievement is also lower than that of the average middle school in the state. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area.

In high school, Georgia Cyber outperformed the state in $9^{\text {th }}$ Grade Literature and American Literature but performed below the state average in Analytic Geometry, Biology, Economics, Physical Science, and U.S. History. Performance was indistinguishable in Coordinate Algebra.

Note: statistical significance based on a 95 percent confidence level. By construction, the statewide average value-added school effect is zero.

Comparison of 2014/15, 2013/14, and 2012/13 Value-Added and SGP Summary Results
Previously, Georgia Cyber was included within Odyssey School and not a separate entity, therefore it is not possible to make any year-to-year comparisons for Georgia Cyber.

## Graduation Achievement Charter High School (Formerly Provost Academy)

Key Findings

- In general, Grad Achievement performance in Analytic Geometry, Biology, Coordinate Algebra, Economics, Physical Science and U.S. History is weak relative to the state. Because the school serves students throughout the state it does not have a district comparison group.
- Grad Achievement's performance in 2014/15 is comparable to its performance in 2013/14.
- The school's contribution to student achievement is:
- below the state average in Analytic Geometry, Biology, Coordinate Algebra, Economics, Physical Science and U.S. History.
- indistinguishable from the state average in 9th Grade Literature and American Literature.

## Ivy Preparatory Academy at Gwinnett

## Key Findings

- The value-added estimate of the school's impact on a student's average achievement across all subjects is 0.0542 in middle grades, meaning that, in the middle grades, the Ivy Preparatory Academy at Gwinnett is higher than the state and district averages of middle schools. The school's estimated contribution to student achievement in 9th Grade Literature is also higher than the state and district averages, while Biology and Coordinate Algebra are no different from the state averages (Biology is below the district average).
- In general, the Ivy Preparatory Academy at Gwinnett is strong in middle school math and social studies, and $9^{\text {th }}$ Grade Literature.
- Ivy Preparatory Academy at Gwinnett's performance in 2014/15 is generally improved from its performance in 2013/14 and 2012/13.
- The school's contribution to student achievement is:
- above the state and district averages in middle school math, middle school social studies, and $9^{\text {th }}$ Grade Literature.
- below the district average in Biology.
- indistinguishable from the district and state in middle school ELA and science, and Coordinate Algebra.

Value-Added and SGP Results Summary by Grade Level and Subject
Overall School Effect: 0.0542 Middle
Overall District Effect: 0.0102 Middle
Ivy Preparatory Academy at Gwinnett's contribution to a middle school student's cross-subject average achievement is statistically the average school in the state and the district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area.

|  | Value-Added <br> (Controls for Student Demographics and Prior Test Scores |  |  |  |  | Student Growth Percentiles |  |  |

Comparison of 2014/15, 2013/14 and 2012/13 Value-Added and SGP Summary Results
Ivy Preparatory Academy at Gwinnett's performance in 2014/15 is generally improved from its performance in 2013/14 and 2012/13. The estimated impact on student achievement averaged across all subjects was 0.0542 in 2014/15 compared to -0.0027 in 2013/14 and 0.0077 in $2012 / 13$. Changes in estimated performance in specific subjects showed that social studies improved significantly across the period.

## Ivy Preparatory Academy at Kirkwood for Girls

## Key Findings

- The value-added estimate of the school's impact on a student's average achievement across all subjects is -0.2723 in elementary grades and 0.0254 in middle grades, meaning that Ivy Preparatory Academy at Kirkwood for Girls is below the state and district averages in elementary grades and not significantly different than the state and district averages in middle grades.
- In general, Ivy Preparatory Academy at Kirkwood for Girls' strengths include middle school ELA and social studies, but its performance in elementary ELA, math, science, and social studies as well as middle school math are weak relative to the state and district.
- Ivy Preparatory Academy at Kirkwood for Girls' performance in 2014/15 is largely similar to its achievement in 2013/14 and weaker than in 2012/13. The estimated impact on student achievement averaged across all subjects in elementary school was - 0.2723 in 2014/15, compared to -0.3300 in 2013/14 and -0.0757 in 2012/13. In middle school the cross-subject average contribution to student achievement was 0.0254 in 2014/15, compared to 0.0339 in 2012/13 and -0.0171 in 2013/14.
- The school's contribution to student achievement is:
- above the state average in middle school ELA and social studies.
- below the district and state average in middle school science as well as every elementary subject.
- indistinguishable from the district and state average in middle school math.

## Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: -0.2723 Elementary / 0.0254 Middle Overall District Effect: -0.0062 Elementary / 0.0250 Middle

Ivy Preparatory Academy at Kirkwood for Girls' contribution to an elementary student's average achievement across all subjects is below that of the average elementary school in the state and district. Its contribution to a middle school student's cross-subject average achievement is not statistically different from the average middle school in the state and district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area. While the school did serve students in grade 9 , there were fewer than 15 students taking any one EOC exam and thus no value-added or SGP results are reported at the high school level.

|  | Value-Added <br> (Controls for Student Demographics and Prior Test Scores |  |  |  |  | Student Growth Percentiles |  |  |

| Social Studies | 0.2065 | 90 | Higher | 7 of 33 | Higher | 60 | 89 | 7 of 33 |
| All-Subject Average | 0.0254 | 59 | No | 16 of 33 | No | 50 | 55 | 17 of 33 |
| High |  |  |  |  |  |  |  |  |
| 9th Grade Literature |  |  |  |  |  |  |  |  |
| American Literature |  |  |  |  |  |  |  |  |
| Analytic Geometry |  |  |  |  |  |  |  |  |
| Biology |  |  |  |  |  |  |  |  |
| Coordinate Algebra |  |  |  |  |  |  |  |  |
| Economics |  |  |  |  |  |  |  |  |
| Physical Science |  |  |  |  |  |  |  |  |
| U.S. History |  |  |  |  |  |  |  |  |

Note: statistical significance based on a 95 percent confidence level. By construction, the statewide average value-added school effect is zero. High school results are omitted because there were fewer than 15 students taking any one EOC exam.

Comparison of 2014/15, 2013/14 and 2012/13 Value-Added and SGP Summary Results
Ivy Preparatory Academy at Kirkwood for Girls' performance in 2014/15 is largely similar to its achievement in 2013/14, and weaker than in $2012 / 13$. The estimated impact on student achievement averaged across all subjects in elementary school was -0.2723 in 2014/15, compared to -0.3300 in 2013/14 and -0.0757 in 2012/13. In middle school the cross-subject average contribution to student achievement was 0.0254 in 2014/15, compared to 0.0339 in 2012/13 and -0.0171 in 2013/14.

## Ivy Preparatory Young Men's Leadership Academy

## Key Findings

- The value-added estimate of the school's impact on a student's average achievement across all subjects is -0.1201 in elementary grades and -0.0257 in middle grades, meaning that Ivy Preparatory Young Men's Leadership Academy is below both the state and district average in elementary grades and not significantly different from the state and district average in middle grades.
- In general, Ivy Preparatory Young Men's Leadership Academy's performance in elementary science, elementary social studies, middle school math, and Biology is weak relative to the state and district. However, its contribution to student achievement in $9^{\text {th }} \mathrm{Grade}$ Literature is strong, exceeding the state average.
- Performance at Ivy Preparatory Young Men's Leadership Academy generally improved in the elementary and middle grades relative to the prior year.
- The school's contribution to student achievement is:
- below the state and district averages in elementary science, elementary social studies, middle school math, and Biology.
- above the state average in $9^{\text {th }}$ Grade Literature.

○ indistinguishable from the state and district averages in elementary ELA, elementary Math, middle school ELA, middle school science, and Coordinate Algebra.

## Value-Added and SGP Results Summary by Grade Level and Subject

Overall School Effect: -0.1201 Elementary / -0.0257 Middle
Overall District Effect: -0.0062 Elementary / 0.0250 Middle
Ivy Preparatory Academy Young Men's Leadership Academy's contribution to an elementary student's average achievement across all five CRCTtested subjects is less than the average elementary school in the state and district, and its contribution to a middle school student's cross-subject average achievement is not statistically different than that of the average middle school in the state and district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area.

## Mountain Education Center

Key Findings

- Mountain Education Center's contribution to student achievement exceeds the state average in $9^{\text {th }}$ Grade Literature, Coordinate Algebra, Biology, and Economics. Since the school serves students from multiple counties it does not have a district comparison group.
- Compared to 2013/14, Mountain Education Center saw an increase in the contribution to student achievement in all subjects with the exception of Physical Science.
- The school's contribution to student achievement is:
- above the state average in $9^{\text {th }}$ Grade Literature, Coordinate Algebra, Biology and Economics.
- indistinguishable from the state average in American Literature, Analytic Geometry, Physical Science, and U.S. History.

## Odyssey School (Not Including Georgia Cyber Academy)

Key Findings

- The value-added estimate of the school's impact on a student's average achievement across all subjects is -0.0338 in elementary grades and -0.0372 in middle grades, meaning that Odyssey School is indistinguishable from the state and district averages in elementary and middle school.
- In general, Odyssey School's strengths include elementary science and middle school math and its weaknesses include elementary math, middle school science, and middle school social studies.
- The school's contribution to student achievement is:
- above the state average in elementary science and middle school math
- indistinguishable from the state average in elementary ELA, middle school ELA, and elementary social studies
- below the state average in elementary math, middle school science, and middle school social studies
- No historical comparisons are available because Odyssey and Georgia Cyber Academy were treated as a single school in prior years.

Value-Added and SGP Results Summary by Grade Level and Subject
Overall School Effect: -0.0338 Elementary / -0.0372 Middle Overall District Effect: -0.0273 Elementary / 0.0014 Middle

Odyssey School's contribution to an elementary student and a middle school student's average achievement across all four Milestones-tested subjects is indistinguishable from the average elementary and middle school in the state or district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area.

|  | Value-Added <br> (Controls for Student Demographics and Prior Test Scores |  |  |  |  | Student Growth Percentiles |  |  |

Note: statistical significance based on a 95 percent confidence level. By construction, the statewide average value-added school effect is zero.

Comparison of 2014/15, 2013/14, and 2012/13 Value-Added and SGP Summary Results
In prior years, data on Odyssey School included students enrolled in the Georgia Cyber Academy, therefore it is not possible to make any year-to-year comparisons for the Odyssey School.

## Pataula Charter Academy

## Key Findings

- The value-added estimate of the school's impact on a student's average achievement across all subjects is 0.0109 in elementary grades and 0.0450 in middle grades, meaning that Pataula Charter Academy is not significantly different than the state average in elementary and middle grades. It is statistically above the district in middle school. At the high school level, the value-added estimates in Biology are above the state average while other subjects are indistinguishable from the state average.
- In general, Pataula Charter Academy's performance is strong in middle school ELA and middle school social studies relative to the fivecounty area it serves, but its performance in other elementary and middle school subjects is average. The school's performance is also strong in high school Biology where its contribution to student achievement exceeds the state average.
- Relative to 2013/14, Pataula Charter Academy's performance is generally equivalent in 2014/15.
- The school's contribution to student achievement is:
- above the five-county average in middle school social studies, middle school ELA, and Biology.
- indistinguishable from the state average in all elementary subjects, middle school math, middle school science, middle school social studies, $9^{\text {th }}$ Grade Literature, Analytic Geometry, Coordinate Algebra, and Physical Science

Value-Added and SGP Results Summary by Grade Level and Subject
Overall School Effect: 0.0109 Elementary / 0.0450 Middle
Overall District Effect: -0.0235 Elementary / -0.0271 Middle
Pataula Charter Academy's contribution to an elementary student and a middle school student's average achievement across all five CRCTtested subjects is not statistically different from the average elementary and middle school in the state. It is above the five surrounding county districts in middle school. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area.

## Utopian Academy for the Arts

## Key Findings

- The value-added estimate of the school's impact on a student's average achievement across all subjects is -0.0906 in middle grades, meaning Utopian Academy for the Arts is below the state and district average in middle grades.
- In general, Utopian's performance is weak in middle school science and social studies.
- Because 2014/15 was the first year of operation, historical comparisons are not possible.
- The school's contribution to student achievement is:
- above the district average in middle school math
- indistinguishable from the state and district average in ELA
- below the state and district average in science and social studies.

Value-Added and SGP Results Summary by Grade Level and Subject
Overall School Effect: -0.0906 Middle
Overall District Effect: -0.0269 Middle

Utopian Academy for the Art's contribution to a middle student's average achievement across all subjects is below that of the average middle school in the state and district. It is important to note that averaging achievement scores across subjects masks any variation in school performance between subject areas. As a result, the table below includes the school's effect on student achievement in each subject area.

|  | Value-Added <br> (Controls for Student Demographics and Prior Test Scores |  |  |  |  | Student Growth Percentiles |  |  |

Comparison of 2014/15, 2013/14, and 2012/13 Value-Added and SGP Summary Results
Utopian Academy began operation in 2014/15, therefore it is not possible to make any year-to-year comparisons for Utopian Academy.

## Subject Area: All-Subject Middle Average

State Charter: Utopian Academy for the Arts
Comparison District: Clayton County
School Value Added for Schools Serving Grades 6, 7, and 8
Average Across All Subjects - [Clayton]
Mean Effect with 95\% Confidence Intervals, All Controls

Mean Student Growth Percentile for Schools Serving Grades 6, 7, and 8
Average Across All Subjects - [Clayton]

## Subject Area: Middle ELA

State Charter: Utopian Academy for the Arts
Comparison District: Clayton County

## Subject Area: Middle Mathematics

State Charter: Utopian Academy for the Arts
Comparison District: Clayton County
School Value Added for Schools Serving Grades 6, 7, and 8 Math - [Clayton]
Mean Effect with 95\% Confidence Intervals, All Controls

Mean Student Growth Percentile for Schools Serving Grades 6, 7, and 8 Math - [Clayton]

## Subject Area: Middle Science

State Charter: Utopian Academy for the Arts
Comparison District: Clayton County
School Value Added for Schools Serving Grades 6, 7, and 8 Science - [Clayton]
Mean Effect with 95\% Confidence Intervals, All Controls

Mean Student Growth Percentile for Schools Serving Grades 6, 7, and 8 Science - [Clayton]

## Subject Area: Middle Social Studies

State Charter: Utopian Academy for the Arts
Comparison District: Clayton County
School Value Added for Schools Serving Grades 6, 7, and 8
Social Studies - [Clayton]
Mean Effect with 95\% Confidence Intervals, All Controls

Mean Student Growth Percentile for Schools Serving Grades 6, 7, and 8 Social Studies - [Clayton]

[^0]:    ${ }^{1}$ Details on the history of charter schools in general and more specifically state chartered schools, are contained in Georgia Department of Education (2012).

[^1]:    ${ }^{2}$ A fourth method used by academic researchers to evaluate charter schools is the analysis of admission lotteries (Hoxby \& Rockoff (2004), Hoxby \& Murarka (2009), Dobbie \& Fryer (2011), Gleason et al. (2010)). By law, charters must hold lotteries for admission if there are more students who want to attend than there are spots available. Since admission is random, one can gauge charter performance by comparing the achievement of students who "win" the lottery and gain admission to a charter to lottery "losers" who sought admission to a charter school, but ended up attending a traditional public school. In effect, the lottery creates a randomized trial where the lottery winners are the treatment group and the lottery losers are the control group. Unfortunately, since admission lottery data are not uniformly collected and not all state charter schools are oversubscribed, this is not a viable strategy in the present context.

[^2]:    ${ }^{3}$ Details on the specification of value-added models and the estimates obtained for Georgia public schools are provided in the Technical Appendix. See also Todd and Wolpin (2003), Guarino, Reckase and Wooldridge (2015) and Sass, Semykina and Harris (2014).
    ${ }^{4}$ For example, Florida's model includes disability status, English Language Learner status, gifted status, prior attendance, student mobility and student age. Washington DC's model controls for poverty status, limited English proficiency status, prior attendance, student mobility and poverty. Louisiana's model includes controls for disability status, gifted status, poverty and prior disciplinary actions.
    ${ }^{5}$ While all value-added models include some measure of prior student performance, specific value-added specifications may vary in the degree to which observable student characteristics are taken into account (including none at all). The analysis below focuses on a value-added model that includes essentially all available student characteristics. However, the Technical Appendix reports results based on alternative value-added specifications with either no student characteristics (i.e. only prior test scores) and the full set of student characteristics except for race/ethnicity. The specification of value-added models used for teacher accountability systems vary across states.
    ${ }^{6}$ For a list of states employing or planning to use student growth models, see Walsh and Isenberg (2015).

[^3]:    ${ }^{7}$ Most student growth models used in teacher accountability systems do not include any student characteristics. One exception is the State of New York. In 2011-12 New York State used both "conditional" and "unconditional" student growth percentiles to evaluate teacher performance. The "conditional" SGP approach essentially estimated a value-added model and then used the resulting predictions to determine a student's ranking and SGP. See American Institutes for Research (2012).
    ${ }^{8}$ Student growth percentiles are generated using a non-parametric quantile regression model. For details see Betebenner (2009) and Goldhaber, Walch and Gabele (2013).
    ${ }^{9}$ See Georgia Department of Education (2016).

[^4]:    ${ }^{10}$ Both same-subject actual prior-year scores and prior scores in other subjects are employed as controls. For other subjects (e.g. prior-year science score when evaluating value added in math), missing values are imputed by using the mean of scores from other subjects.

[^5]:    ${ }^{11}$ The difference between a student's age and the modal age of other students in the same grade is included to control for students who had previously be retained or started kindergarten late. This variable was not included in the value-added model used for 2012-13 state charter schools accountability report.
    ${ }^{12}$ In addition to the value-added model with all of the specified student characteristics as controls, two other specifications were also estimated. One alternative specification omitted student race/ethnicity and the other omitted all student characteristics (and thus only included prior test scores). Results based on these alternative specifications are available in the Technical Appendix.
    ${ }^{13}$ Georgia Department of Education (2015b). Minor differences in underlying data sometimes result in slight discrepancies when compared to the proficiency levels published on the Governor's Office of Student Achievement's Report Card.
    ${ }^{14}$ Cross-school comparisons of proportions of students meeting proficiency targets are provided in the Technical Appendix.

[^6]:    ${ }^{15}$ For 2013-14 the GaDOE computed student growth percentiles in two different ways. In the "cohort SGP" approach, statistical models are updated annually so that the median student receives a SGP of 50 each year. This means that the baseline is reset each year and (as with value-added measures), it is not possible to measure a general increase in student achievement gains across all students. In attempt to capture general changes over time in teacher effectiveness the GaDOE also computed a "baselinereferenced SGP." As the name implies, the baseline-referenced SGP uses the same model each year which was developed using a baseline cohort of students. This results in SGPs relative to the baseline cohort and therefore allows for the possibility of universal improvement in performance over time. However, as a consequence, the median baseline-referenced SGP does not necessarily equal 50. In 201314 cohort-referenced SGPs were used for EOCTs in math, but baseline-referenced SGPs were used for the CRCTs and all non-math EOCTs. Due to the adoption of the new Milestones exams, in 2014-15 only cohort-referenced SGPs were computed. See McCaffrey, Castellano and Lockwood (2014).
    ${ }^{16}$ It is possible to compute standard errors for student growth percentiles, but there is no single accepted methodology for doing so and most state accountability systems that utilize student growth percentiles, including Georgia's, do not report standard errors at this time. The GaDOE is still developing its approach for calculating standard errors. For a discussion of standard errors in the student growth model see Doran, Swanlund and Lemke (2012) and American Institutes for Research (2012).

[^7]:    ${ }^{17}$ The value-added model used in the 2012/13 report did not include a control for a student's age relative to the age of their grade-level peers. Also, the mean student growth percentiles in the 2012/13 report are school wide averages that include all students in a school for which a student growth percentile was calculated. The student growth percentiles averages for 2012/13 reported here include only those students that are included in the value-added model and are limited to the same grade range as reported for the value-added estimates (i.e. elementary, middle and high).
